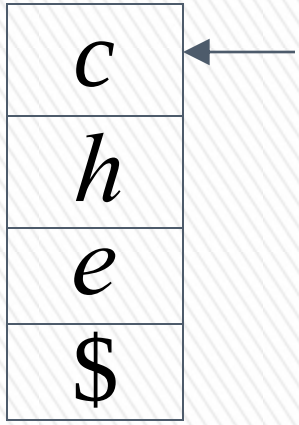
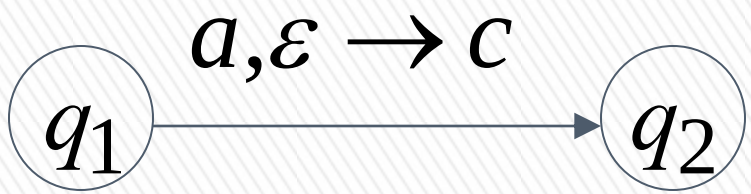
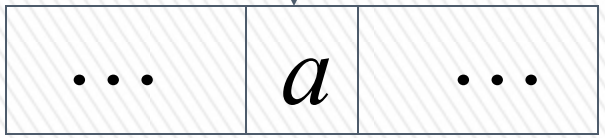
Replace

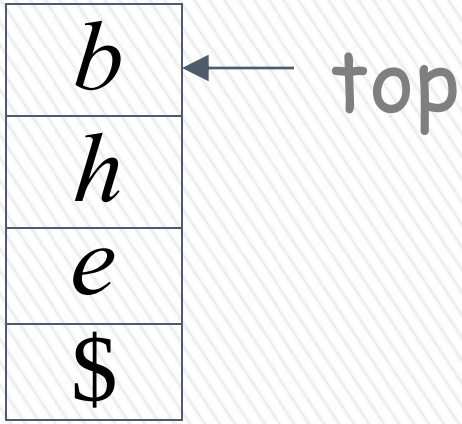




input

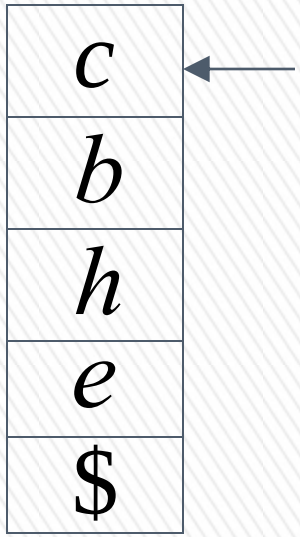


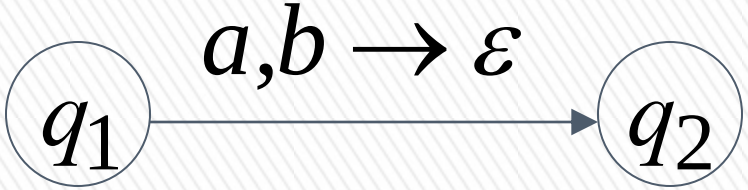
stack



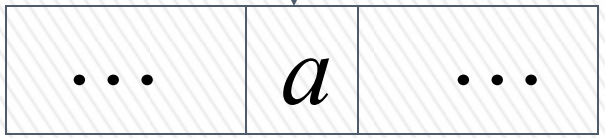
top

Push

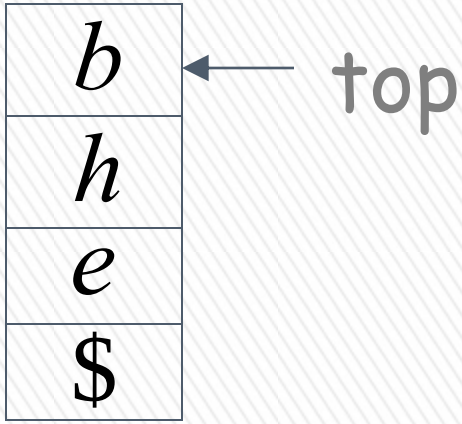




input

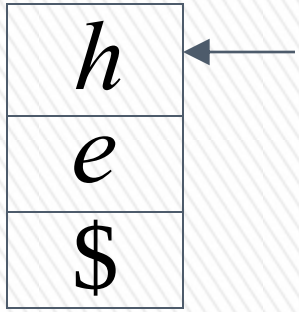


stack

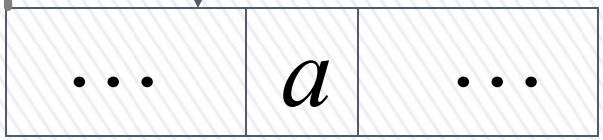


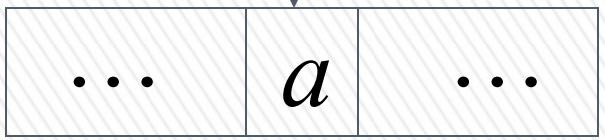
top

Pop

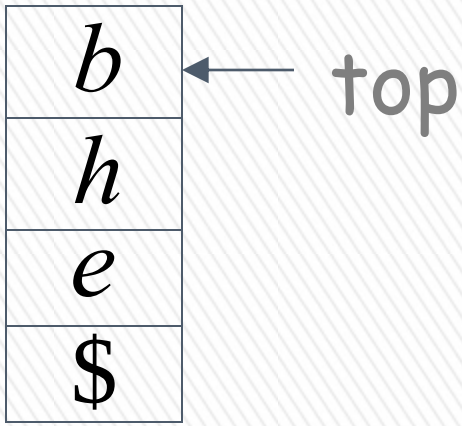


input



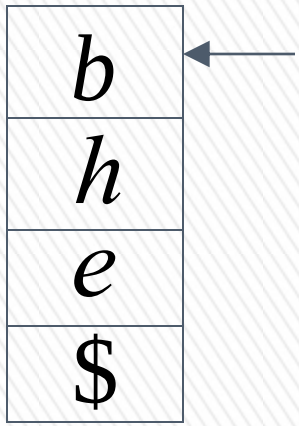


stack

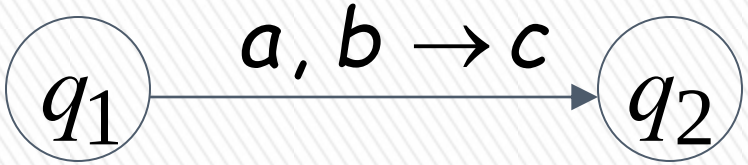


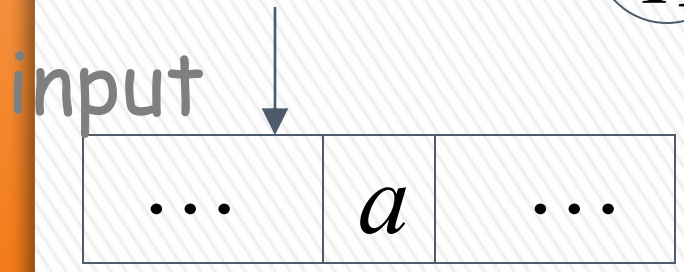
top

No Change



Pop from Empty Stack





stack

Pop

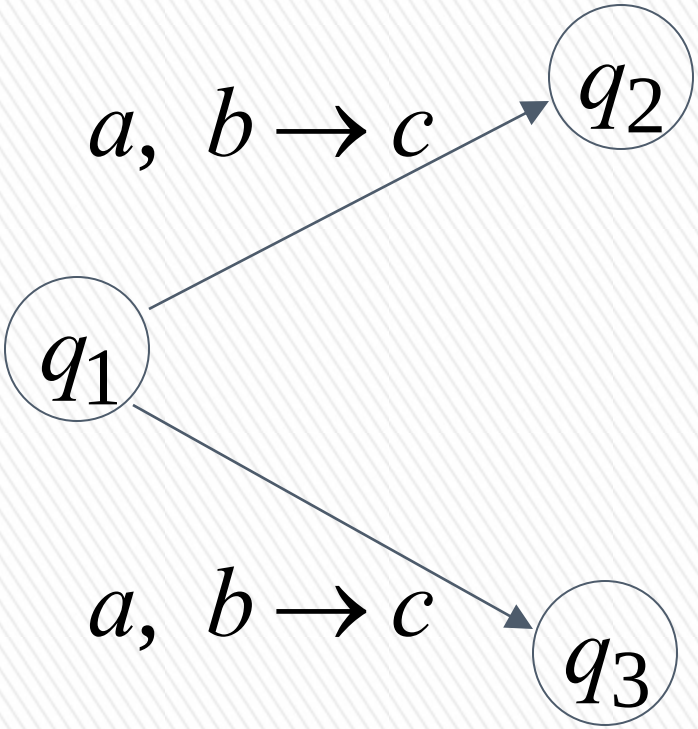
Automaton halts!

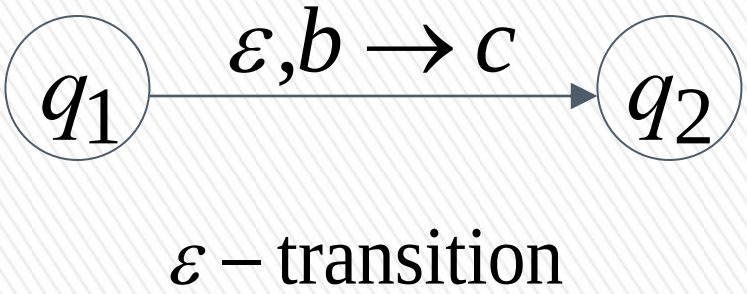
If the automaton attempts to pop from empty stack then it halts and rejects input

Non-Determinism

PDAs are non-deterministic

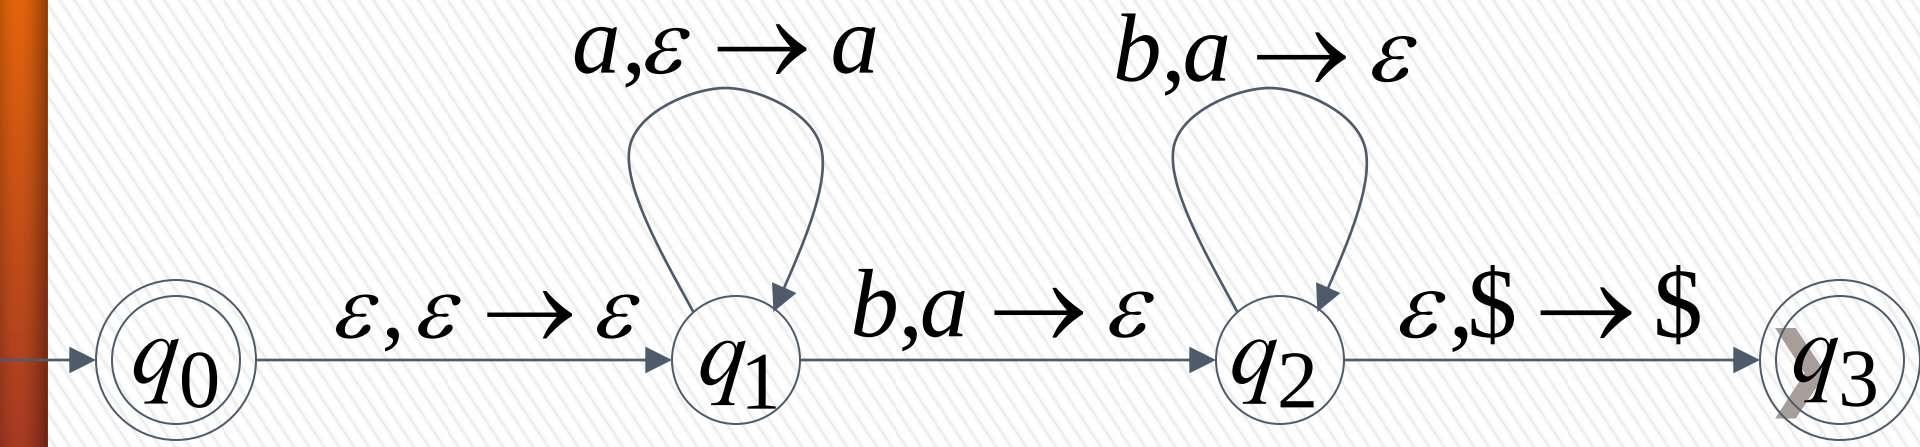
Allowed non-deterministic transitions





Example PDA

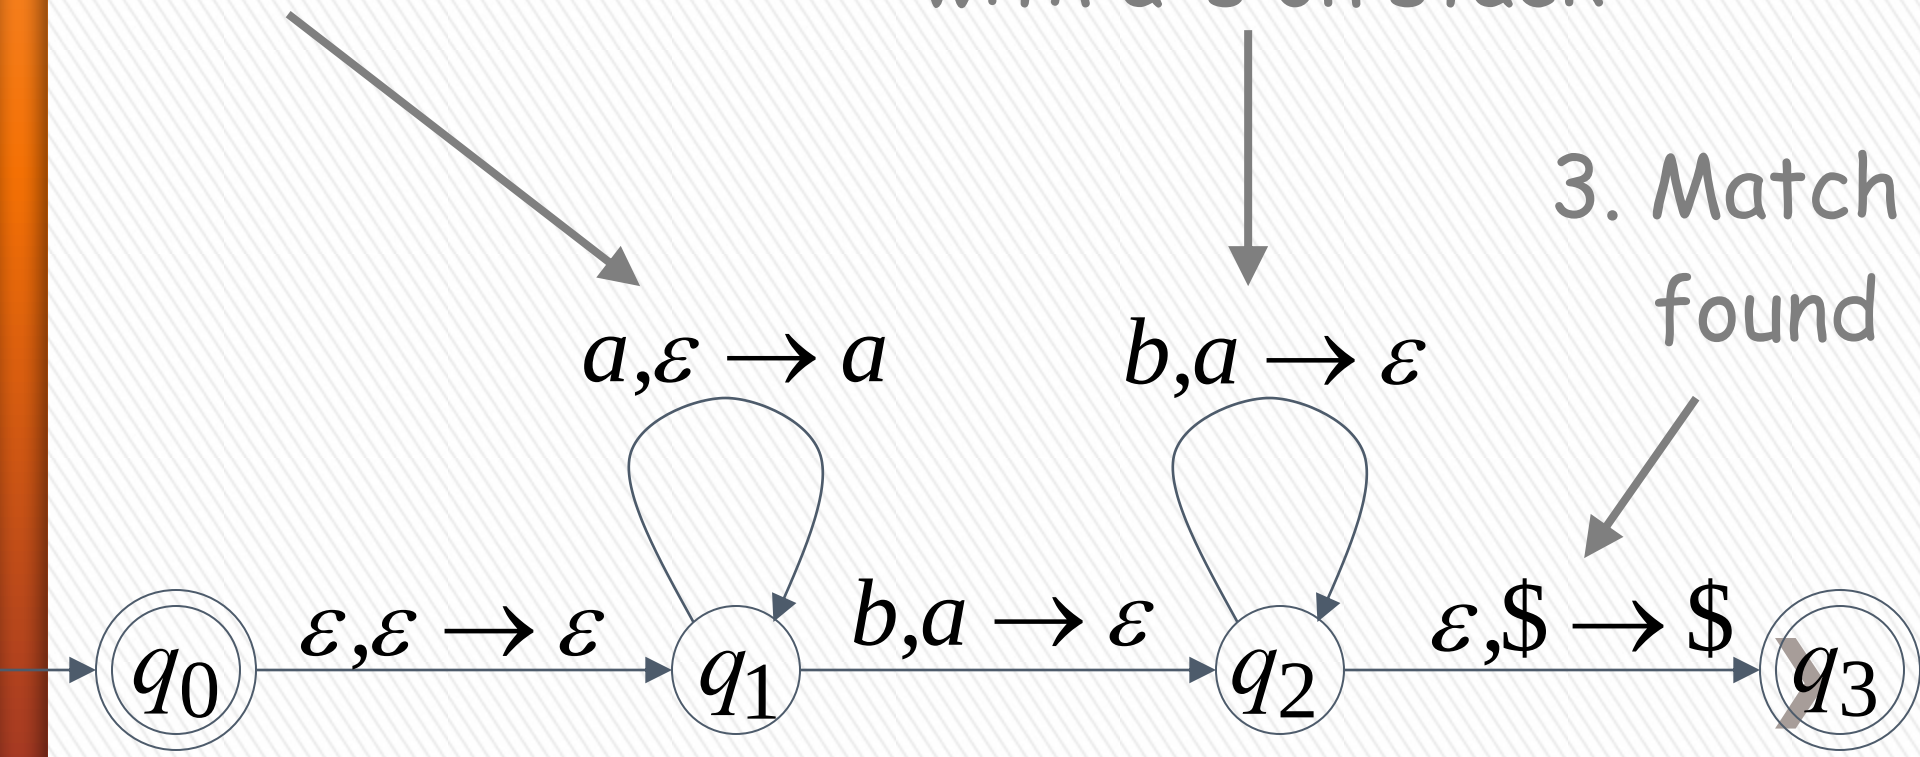
PDA M: $L(M) = \{a^n b^n : n \geq 0\}$



$$L(M) = \{a^n b^n : n \geq 0\}$$

Basic Idea:

1. Push the a's on the stack
2. Match the b's on input with a's on stack
3. Match found



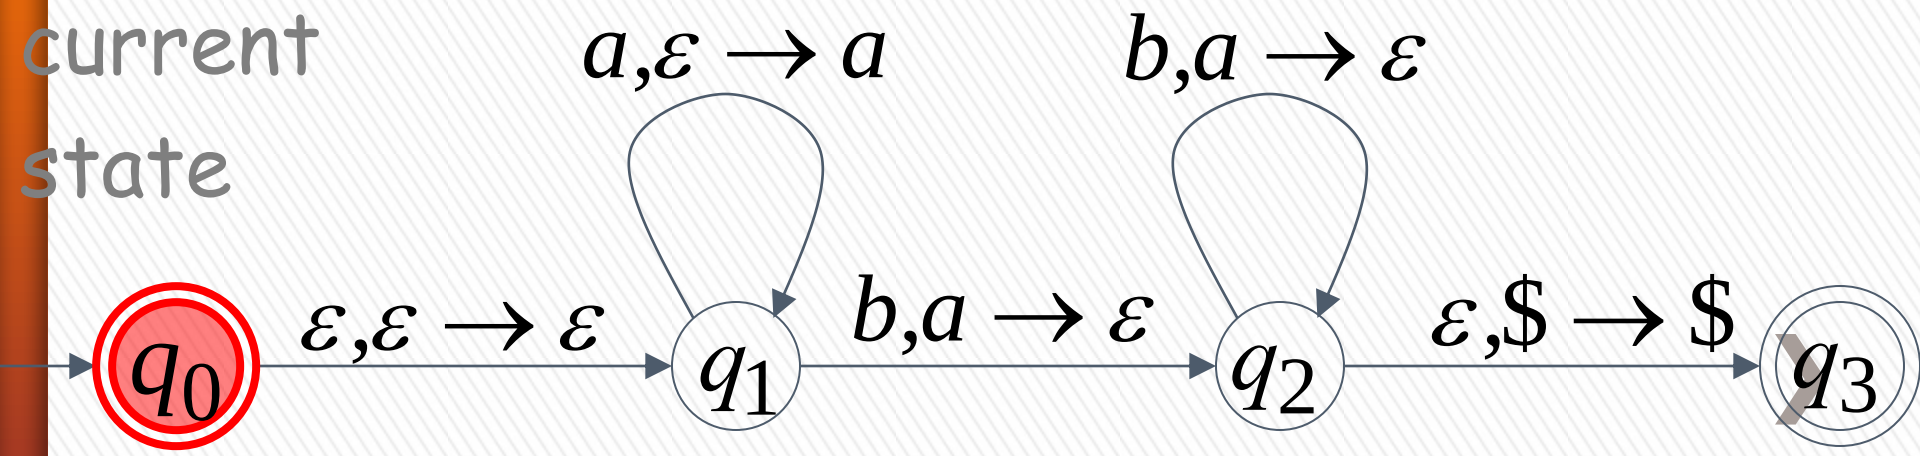
Execution Example: Time 0

Input

a	a	a	b	b	b

Stack

current state

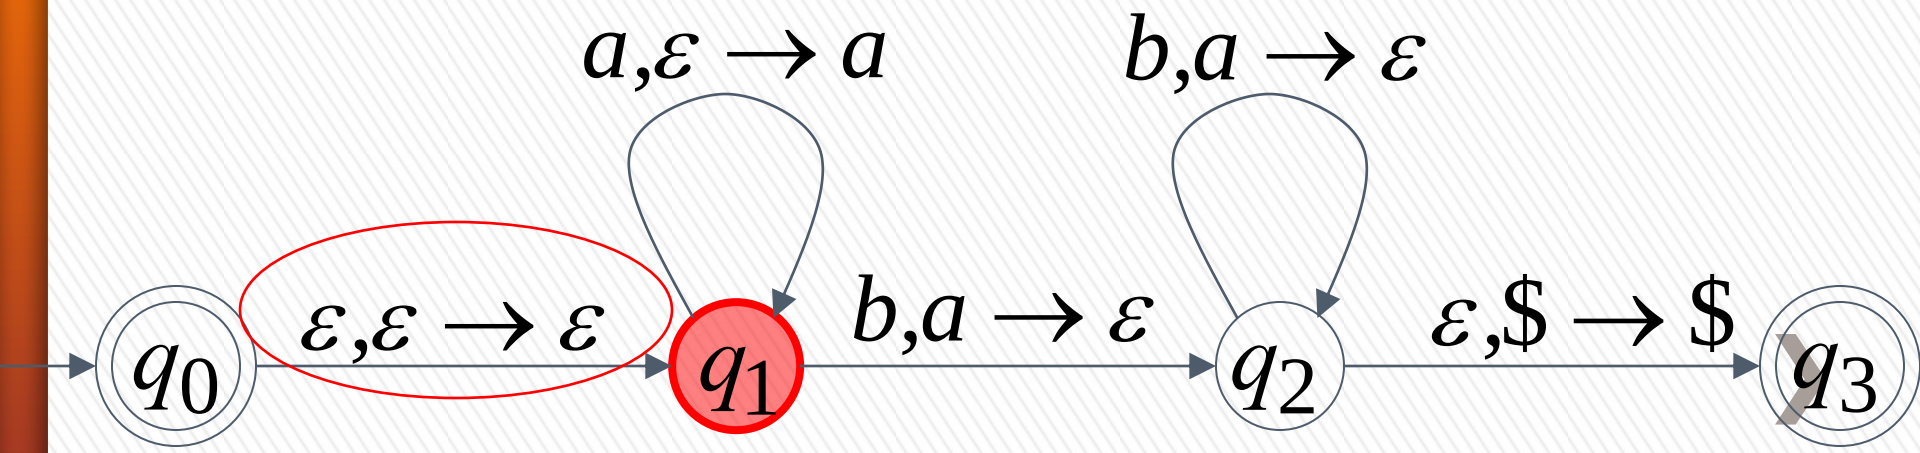


Time 1

Input

a	a	a	b	b	b

Stack



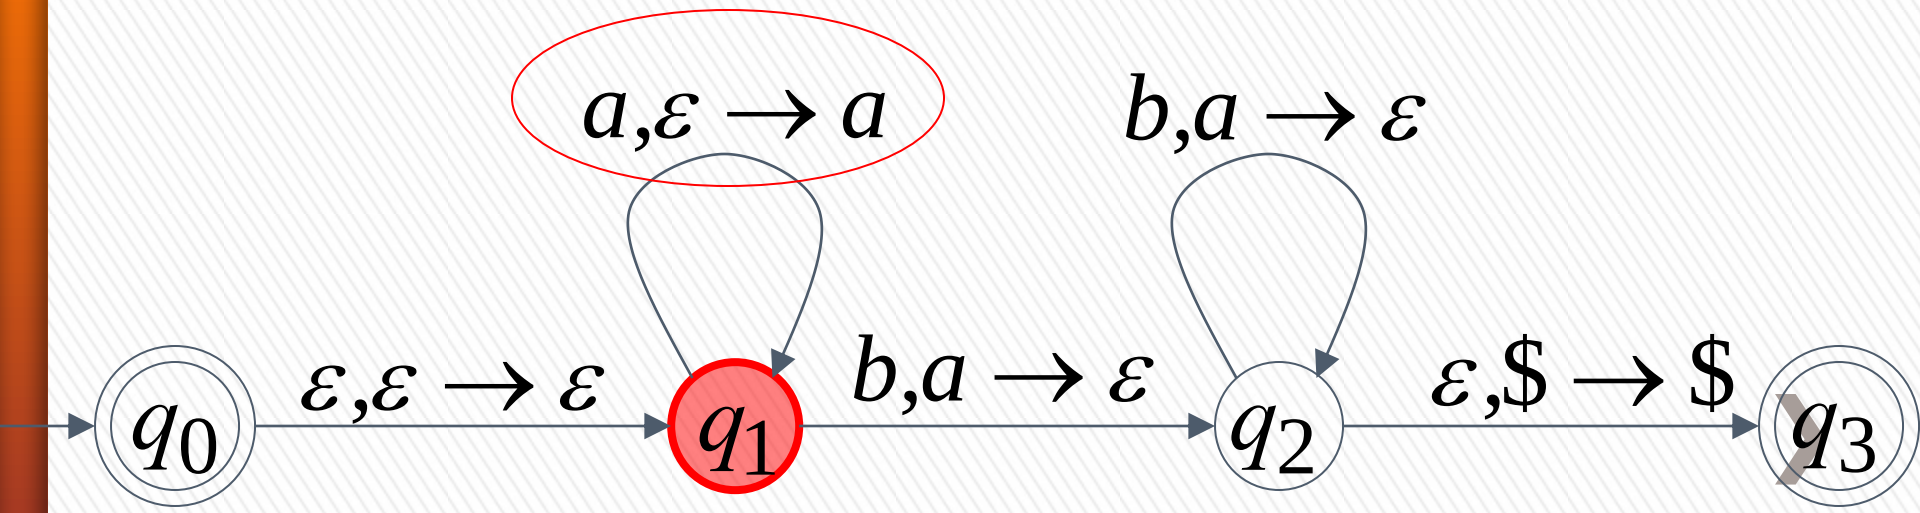
Time 2

Input

a	a	a	b	b	b

a
\$

Stack



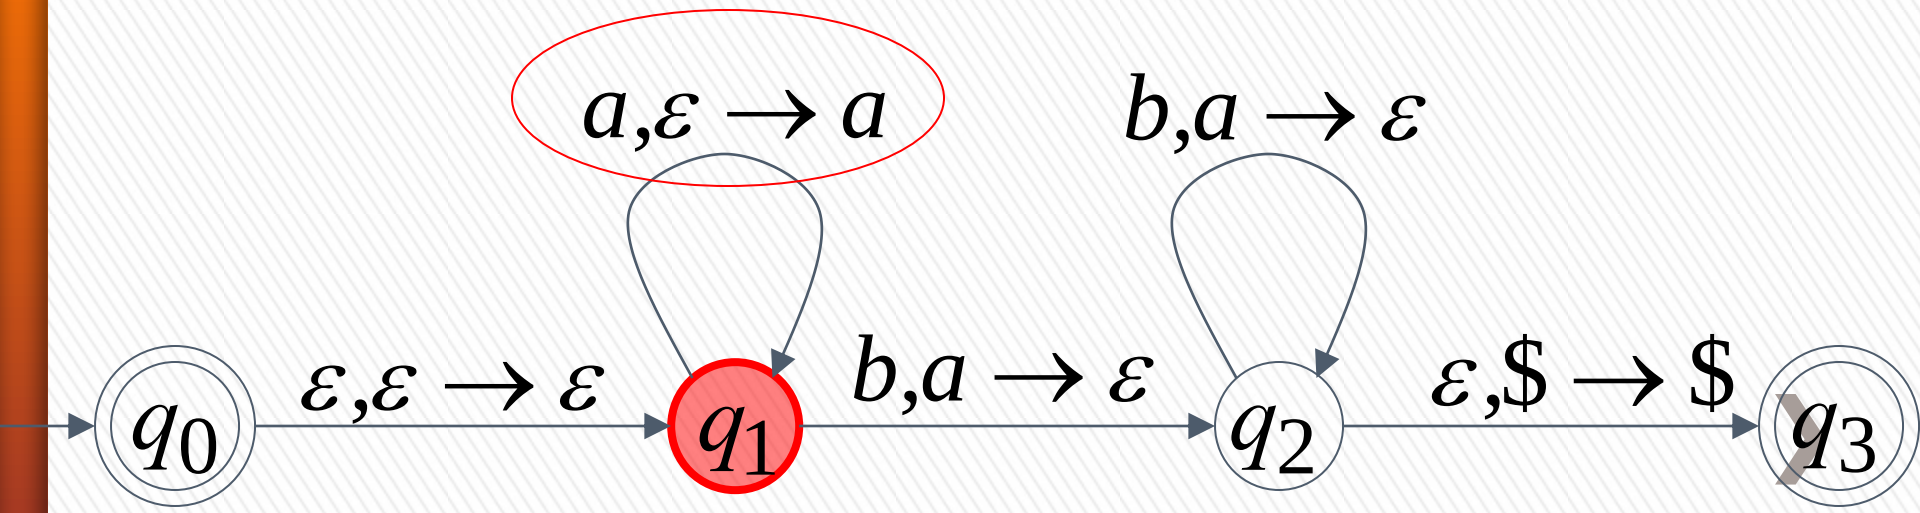
Time 3

Input

a	a	a	b	b	b

a
a
$

Stack



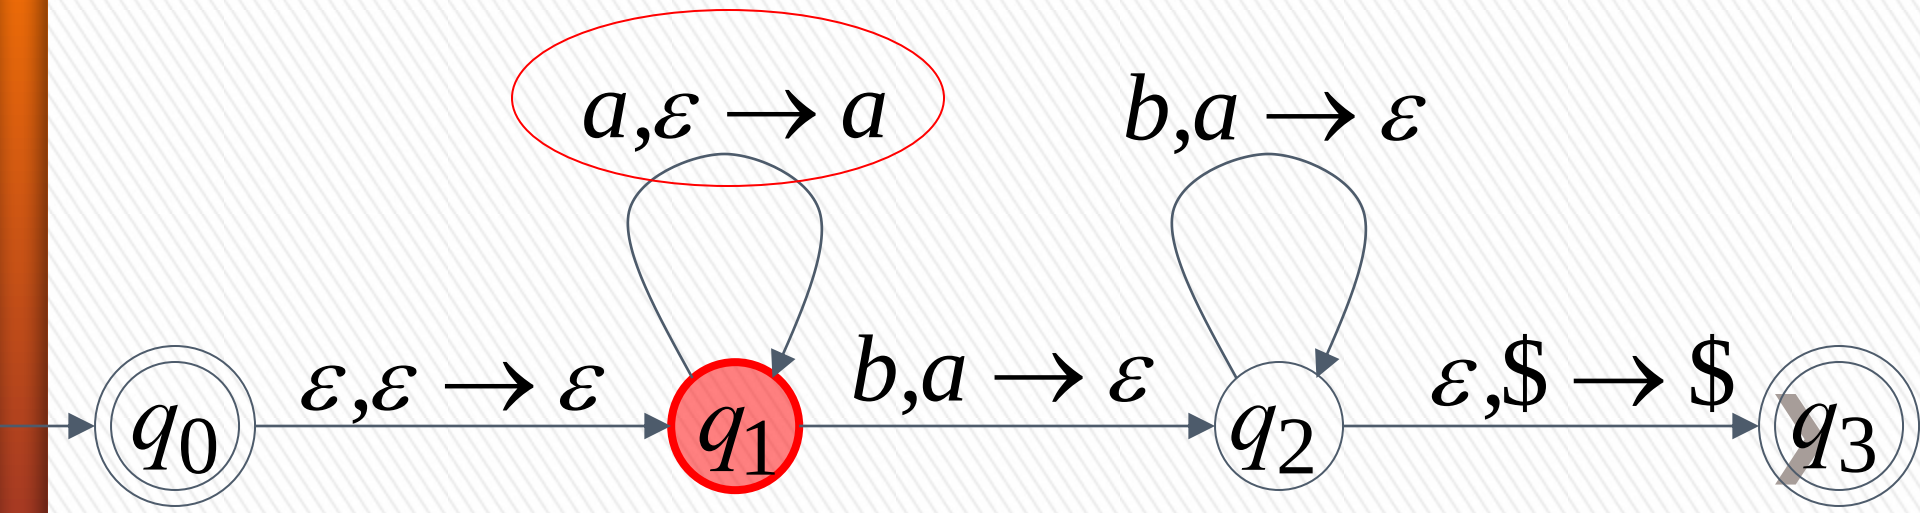
Time 4

Input

a	a	a	b	b	b

a
a
a
$\$$

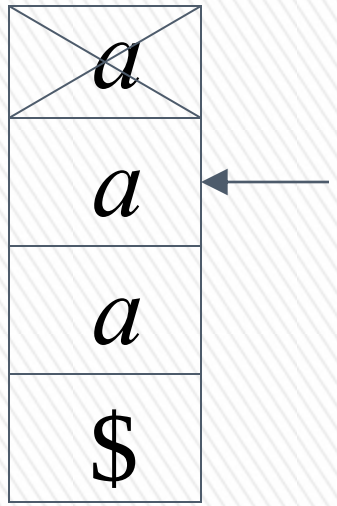
Stack



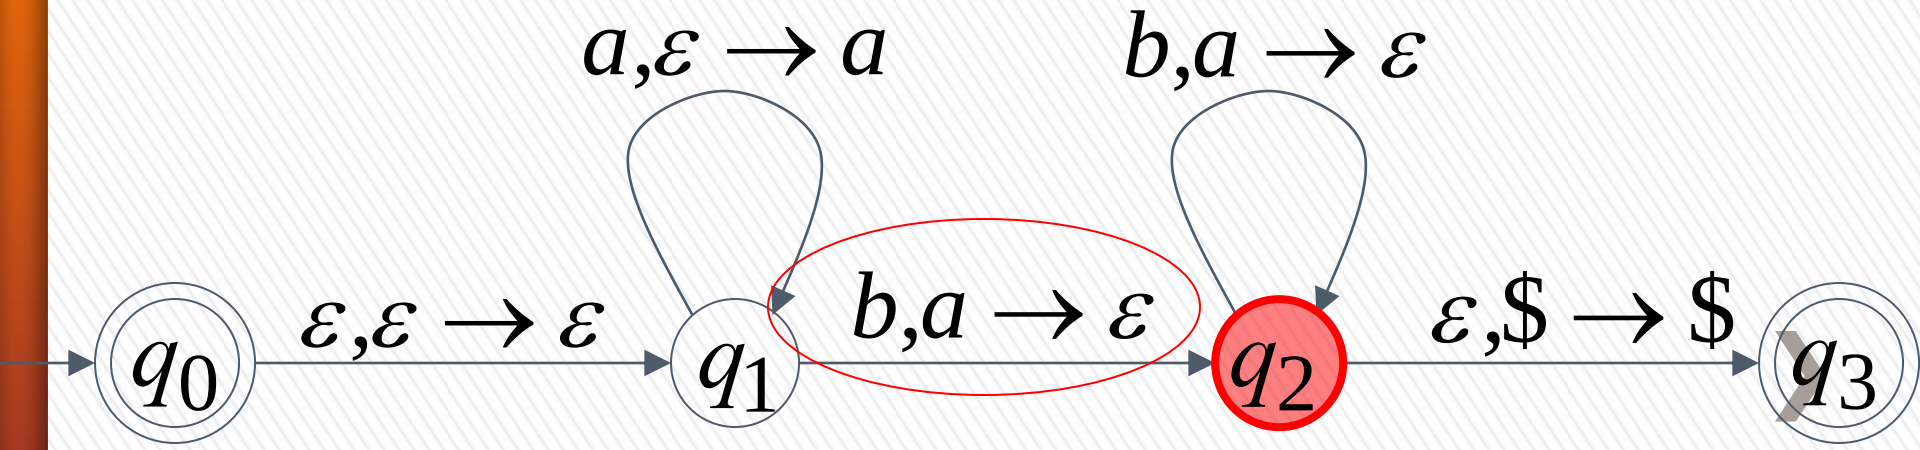
Time 5

Input

a	a	a	b	b	b

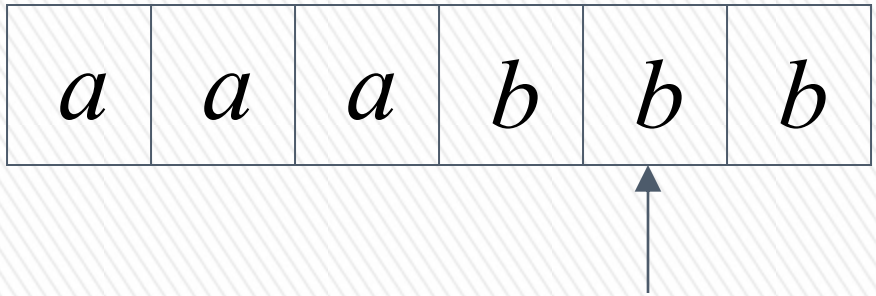


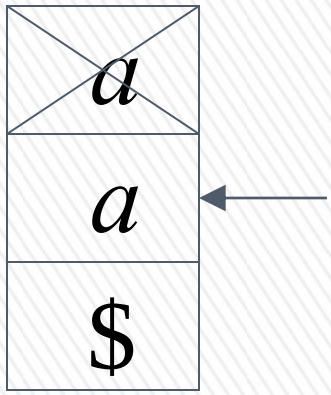
Stack



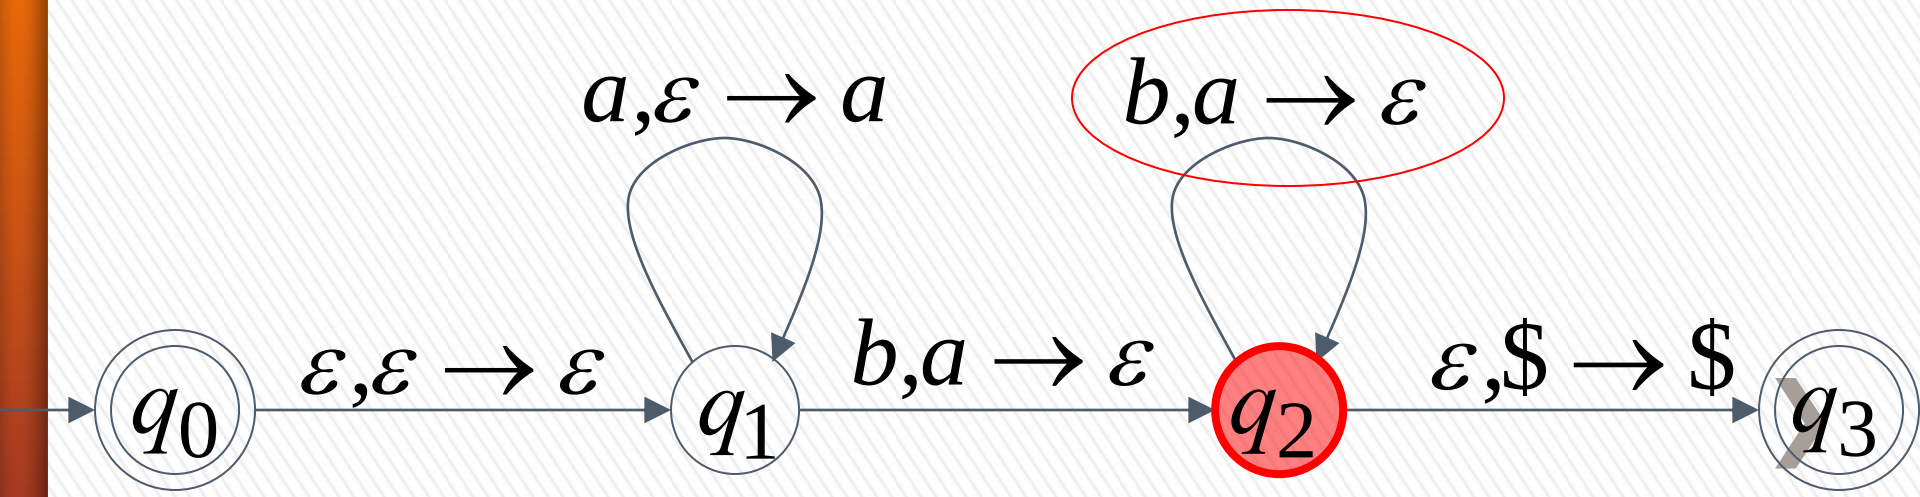
Time 6

Input



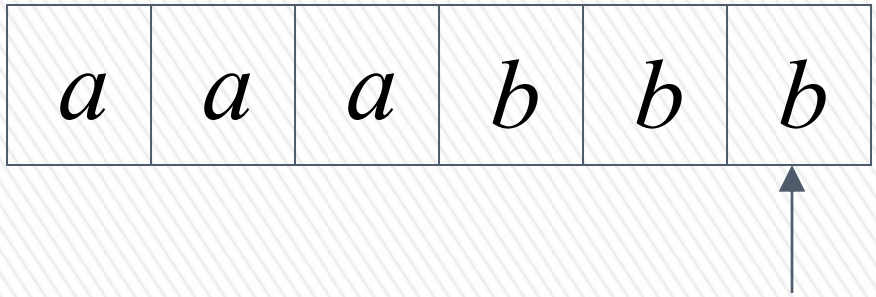


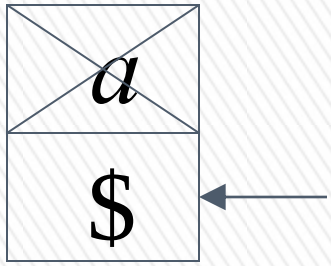
Stack



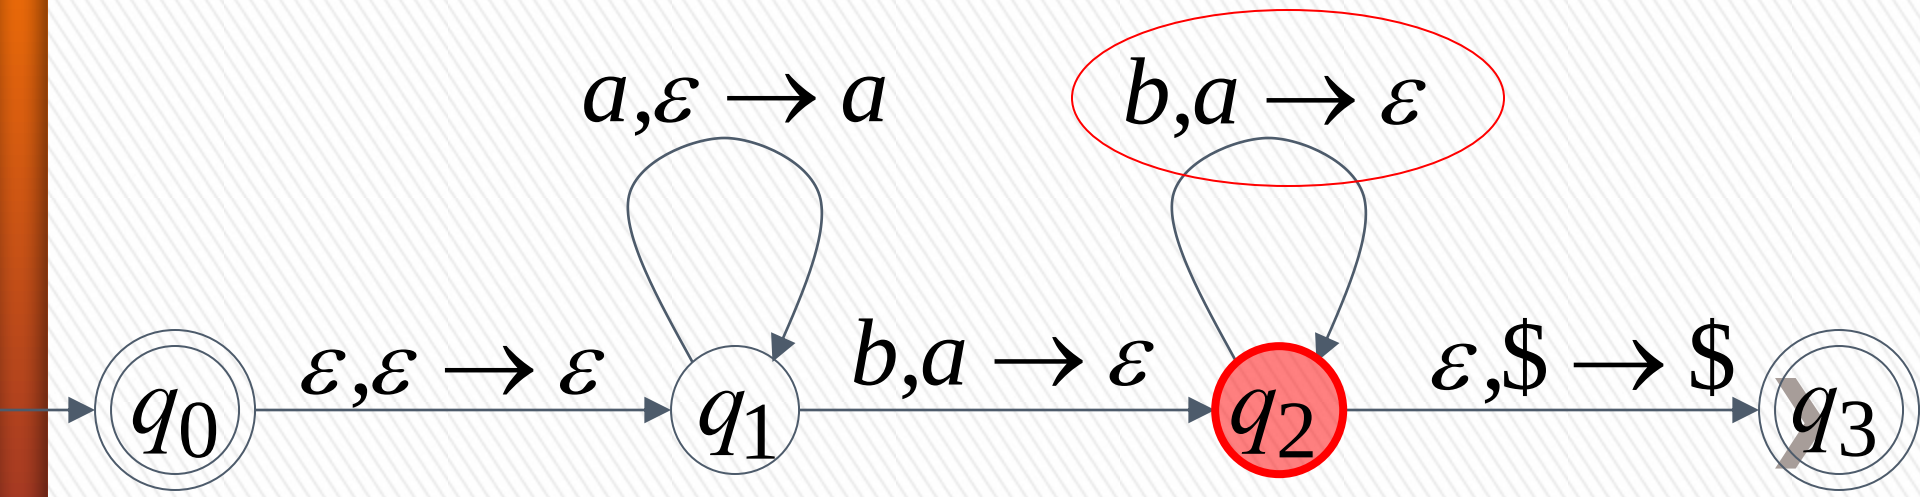
Time 7

Input



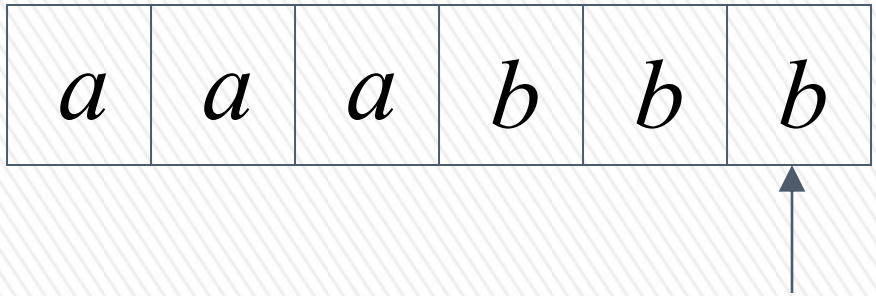


Stack

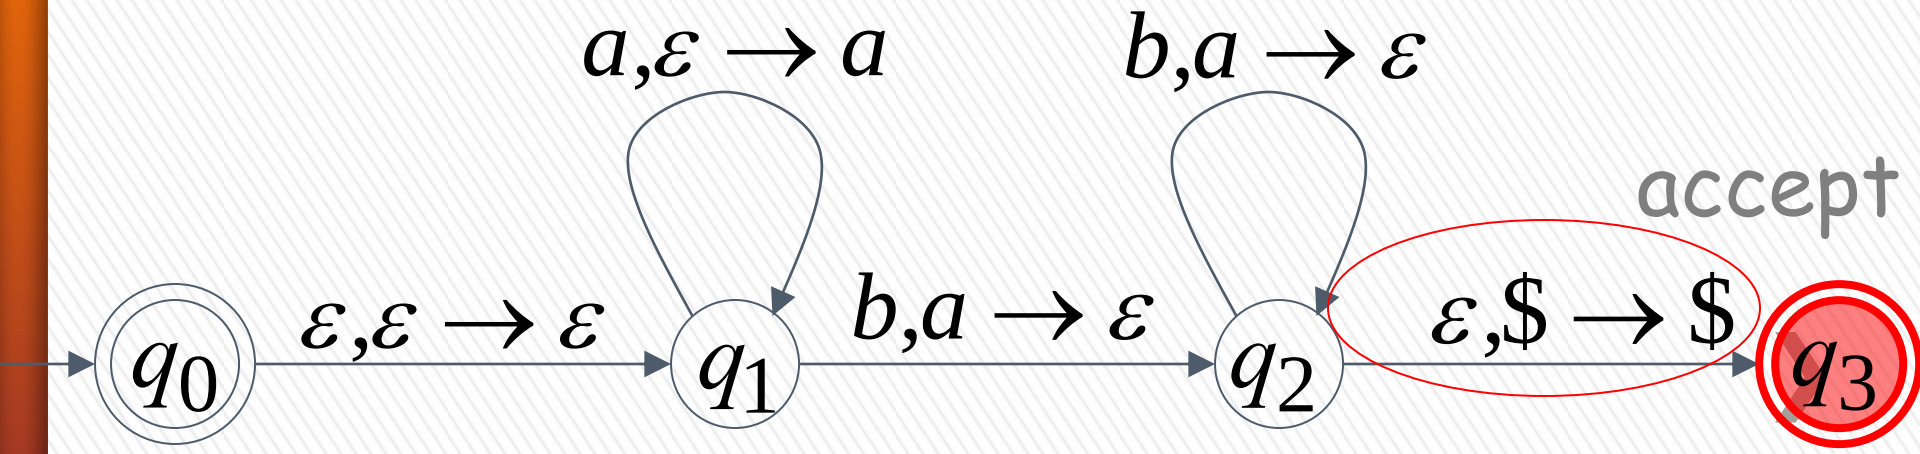


Time 8

Input



Stack



A string is accepted if there is a computation such that:

All the input is consumed

AND

The last state is an accepting state

we do not care about the stack contents at the end of the accepting computation

Rejection Example: Time 0

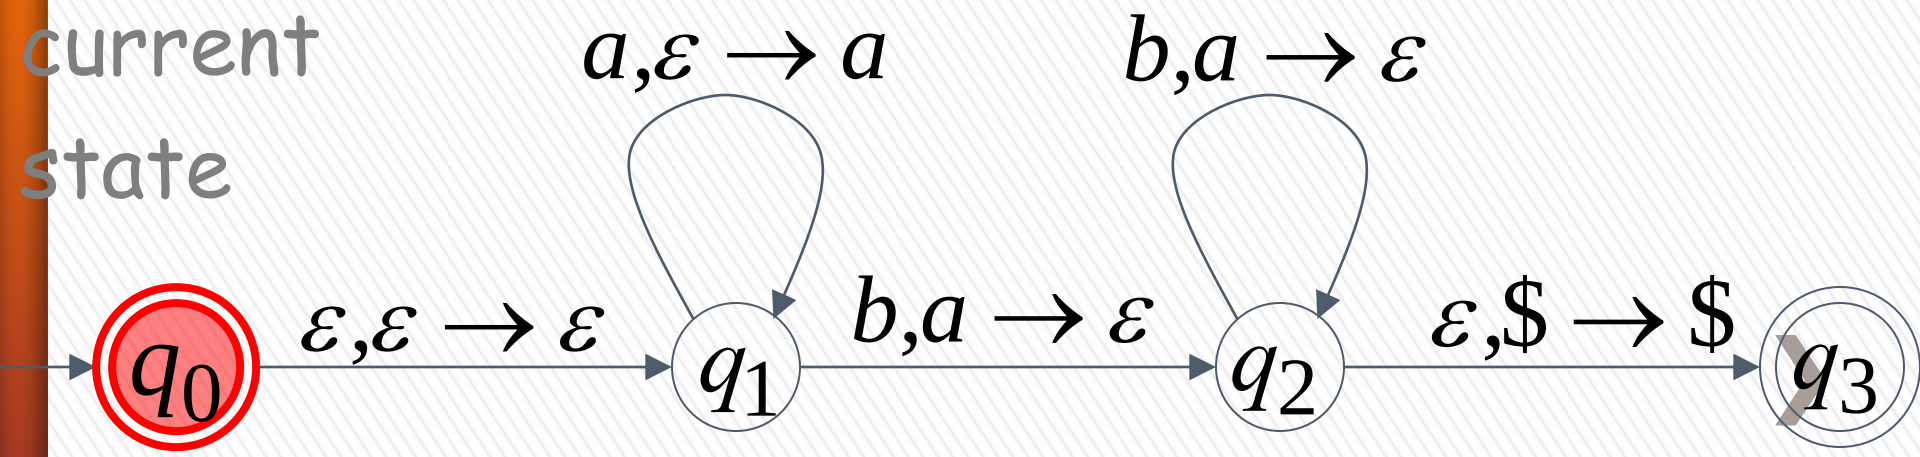
Input

a	a	b

$

Stack

current state



Rejection Example: Time 1

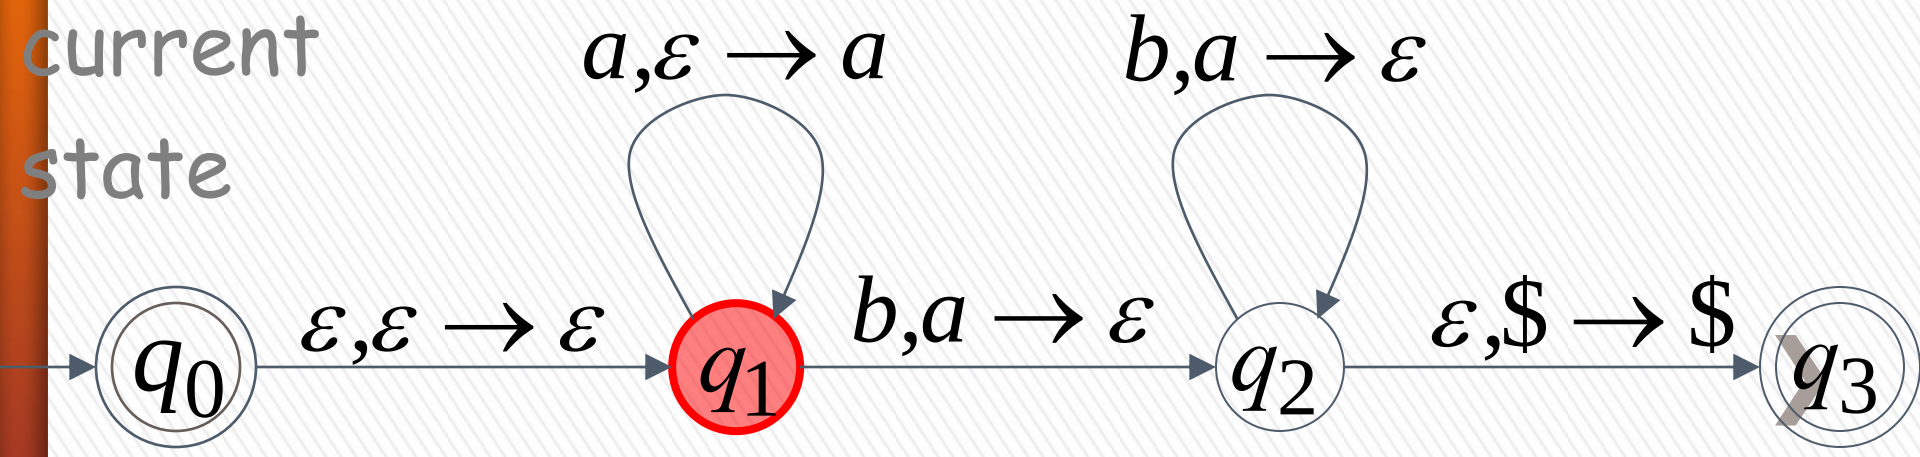
Input

a	a	b

$

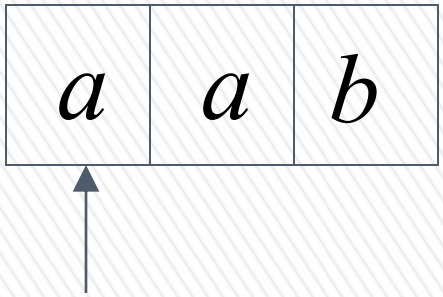
Stack

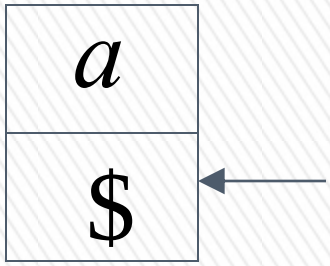
current state



Rejection Example: Time 2

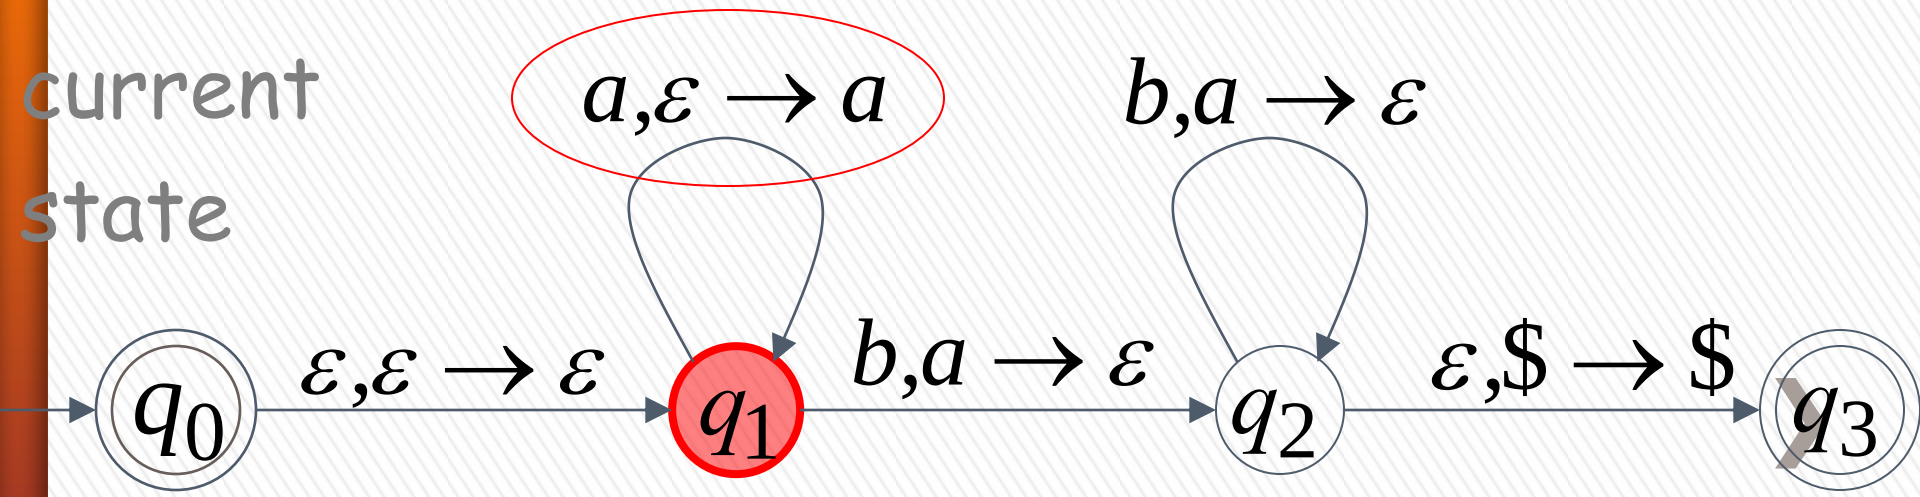
Input





Stack

current state



Rejection Example: Time 3

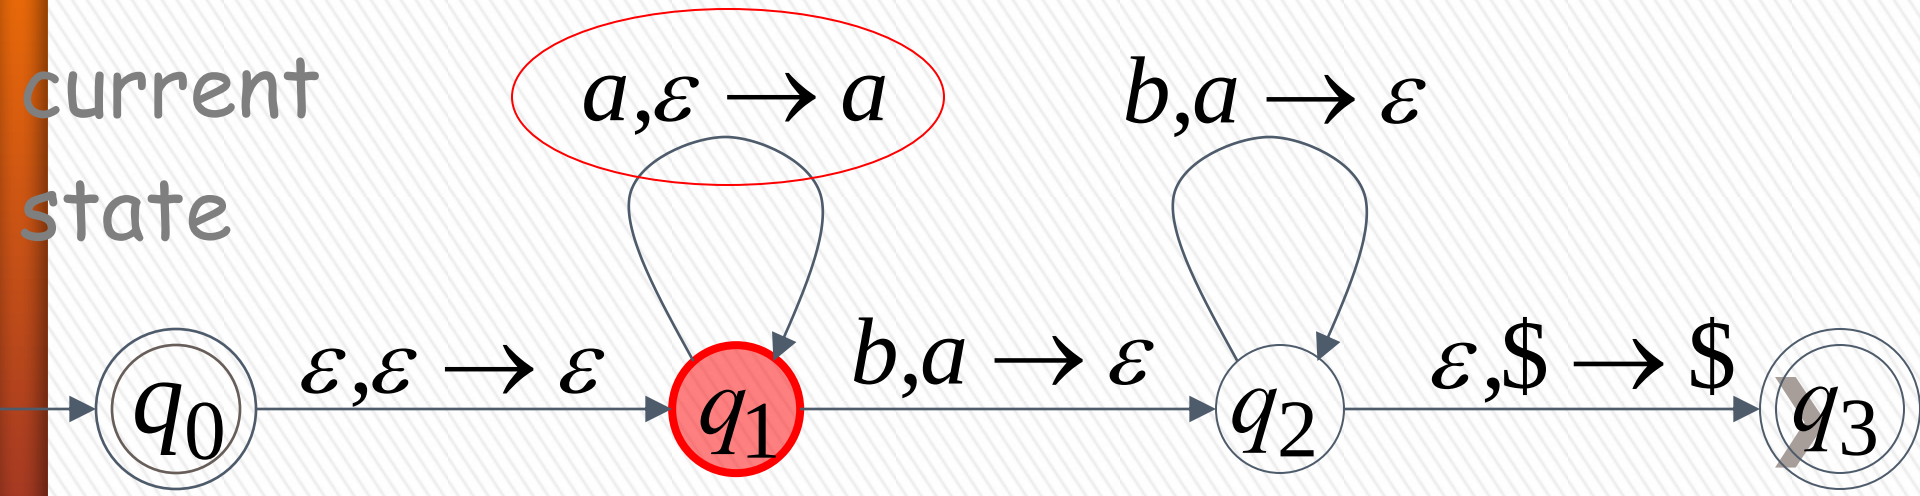
Input

a	a	b

a
a
$\$$

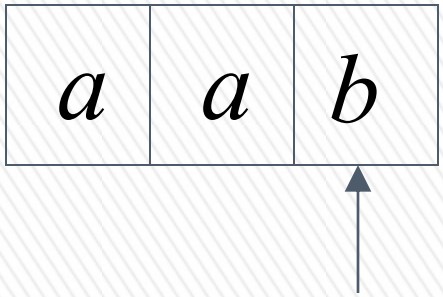
Stack

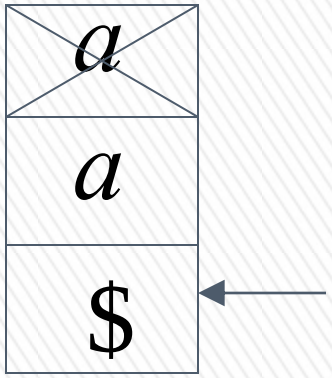
current state



Rejection Example: Time 4

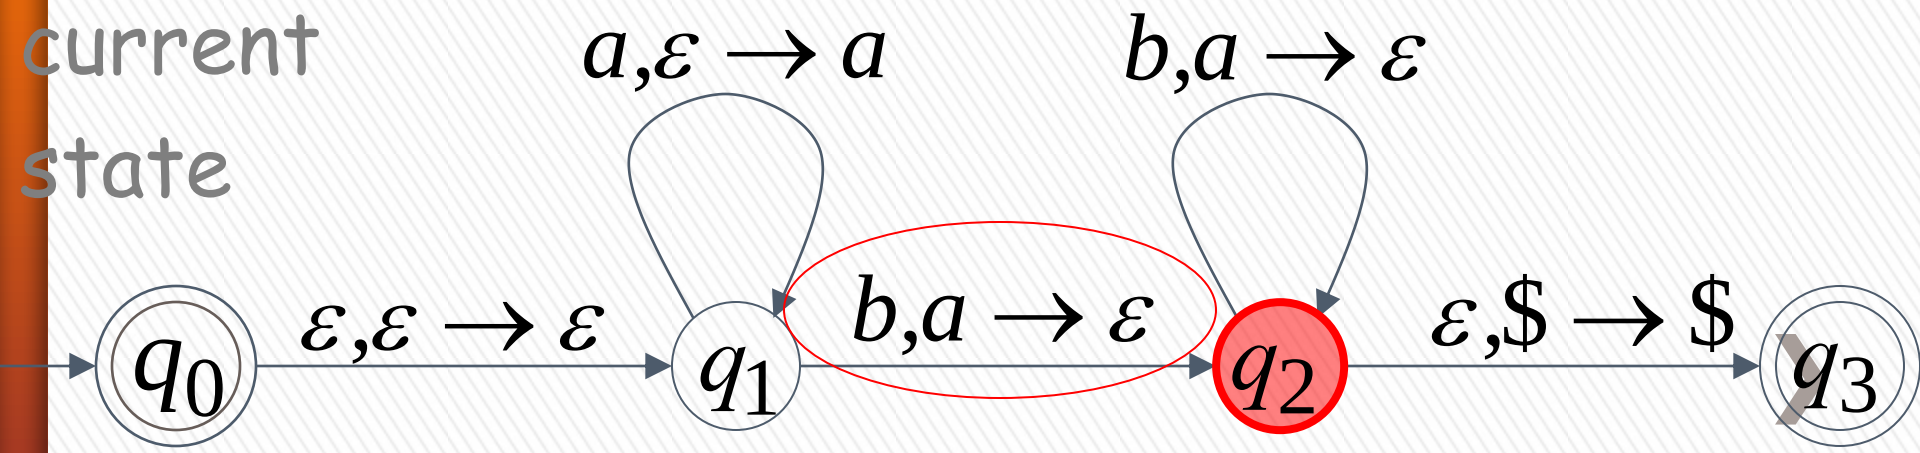
Input





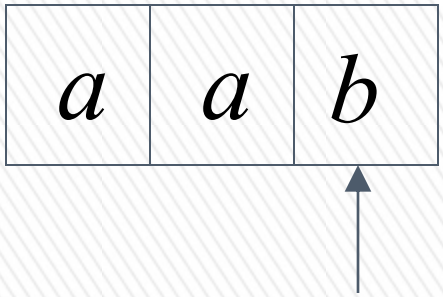
Stack

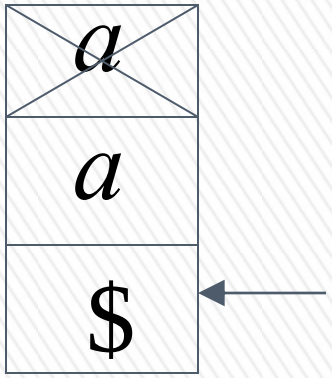
current state



Rejection Example: Time 4

Input

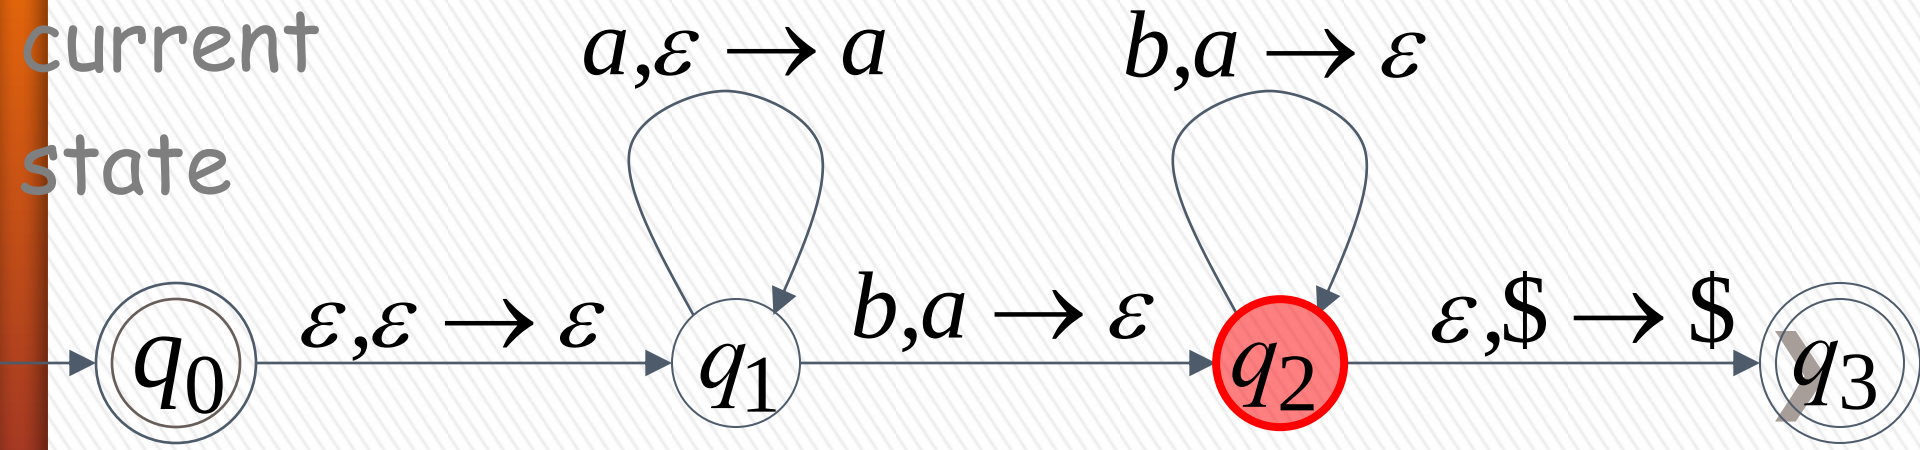




Stack

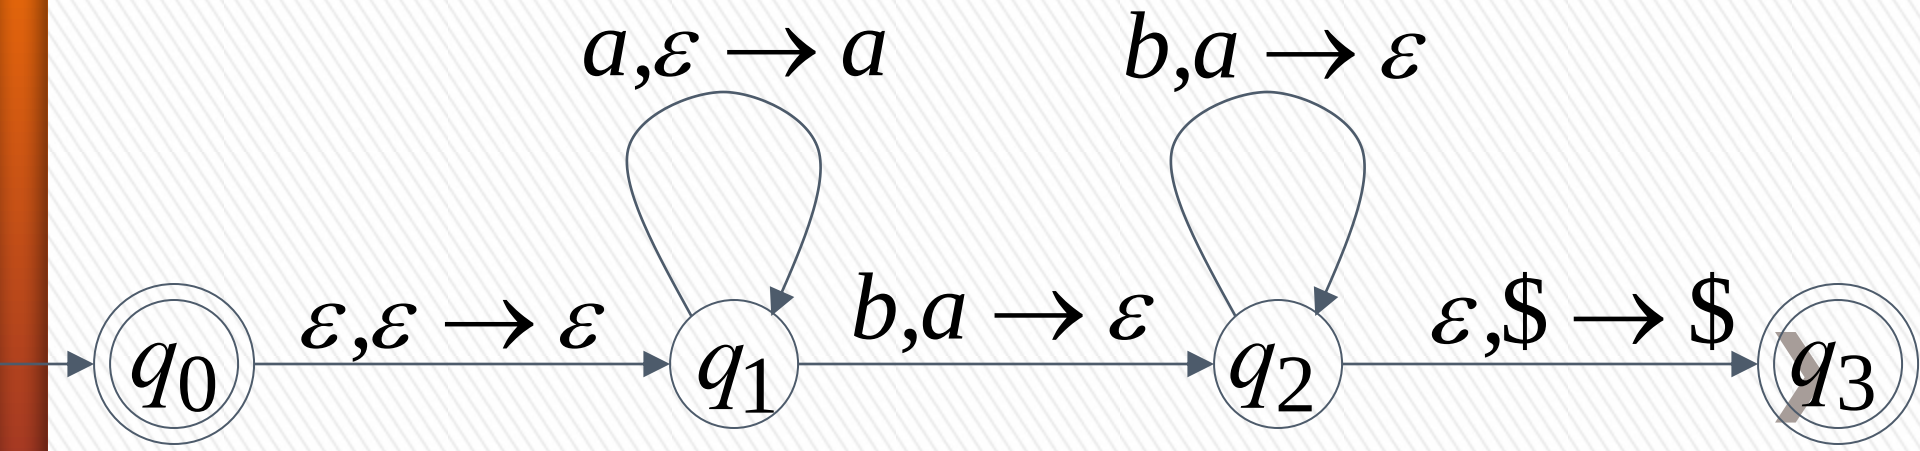
reject

current state



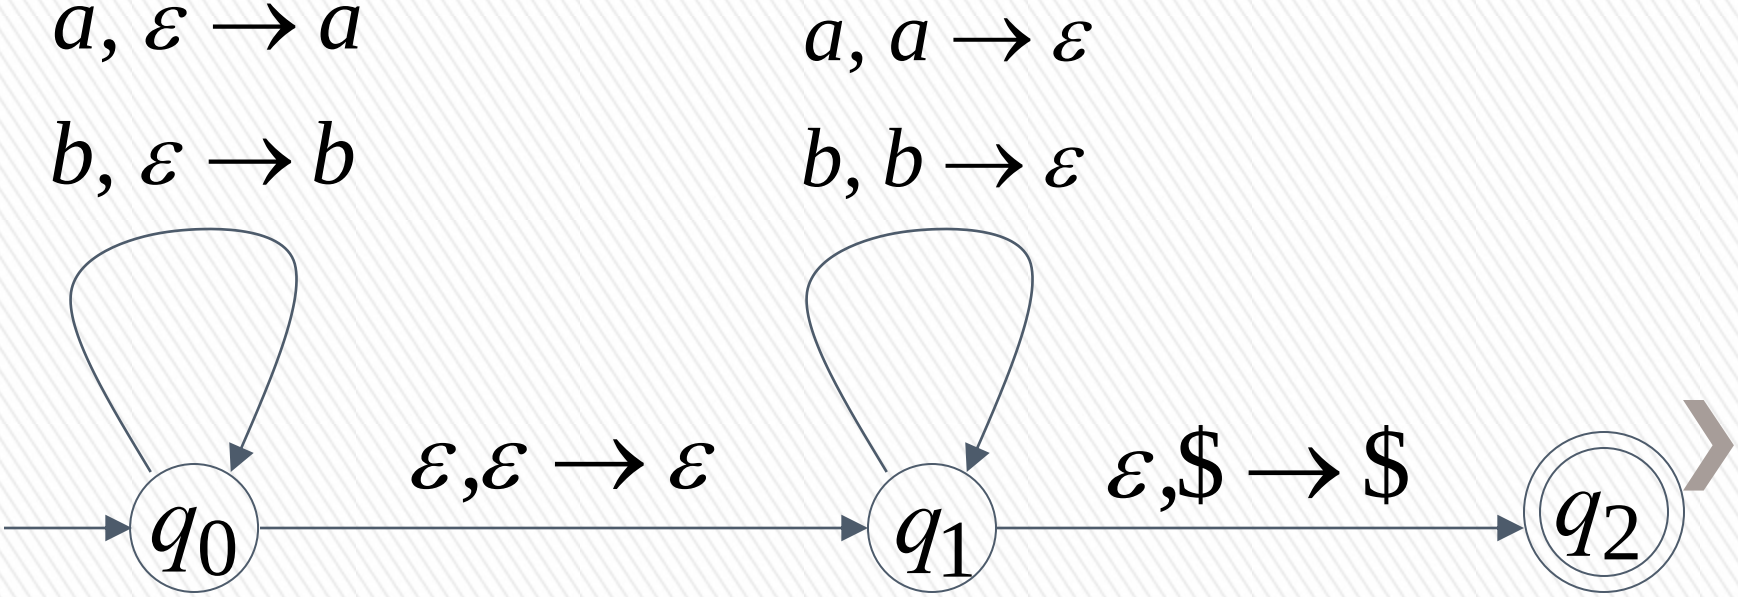
There is no accepting computation for aab

The string aab is rejected by the PDA



Another PDA example

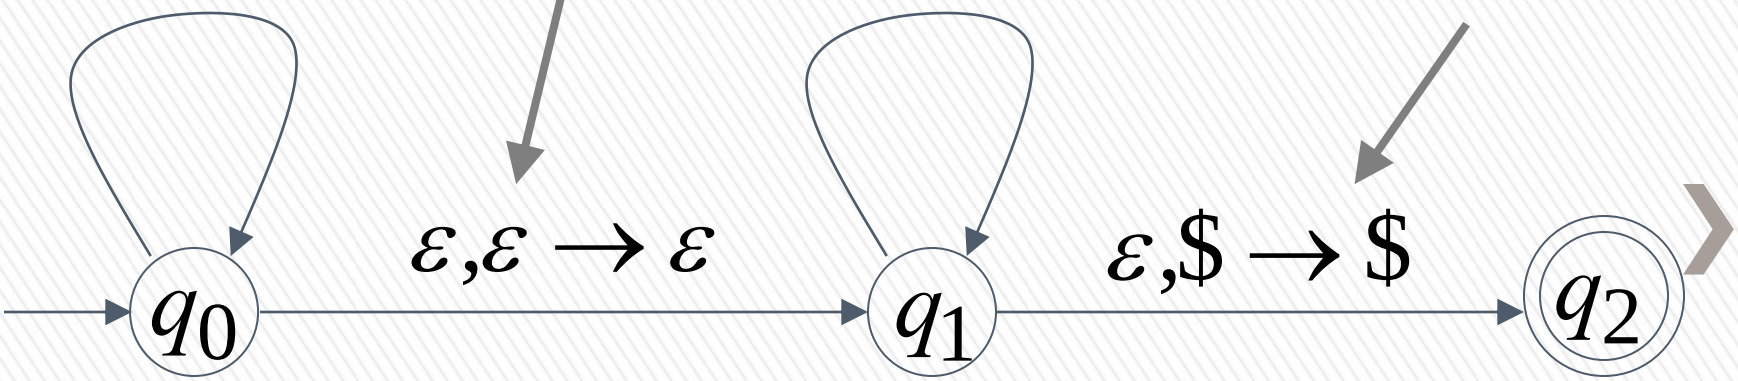
PDA M: $L(M) = \{vv^R : v \in \{a,b\}^*\}$



Basic Idea:

$$L(M) = \{vv^R : v \in \{a,b\}^*\}$$

1. Push v on stack
2. Guess middle of input
3. Match v^R on input with v on stack
4. Match found



Execution Example: Time 0

Input

a	b	b	a

$

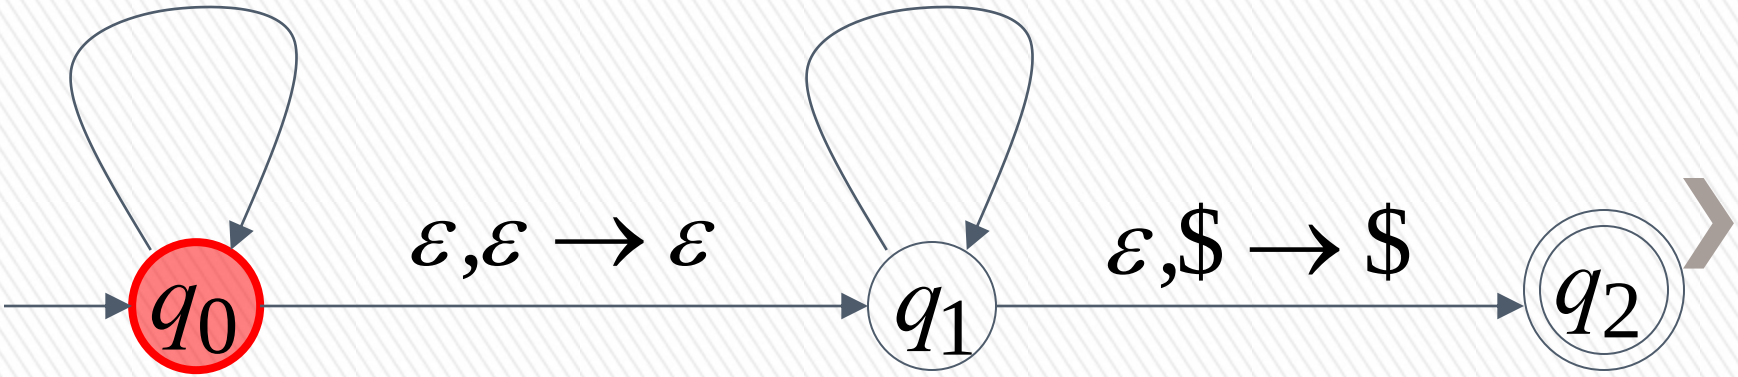
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

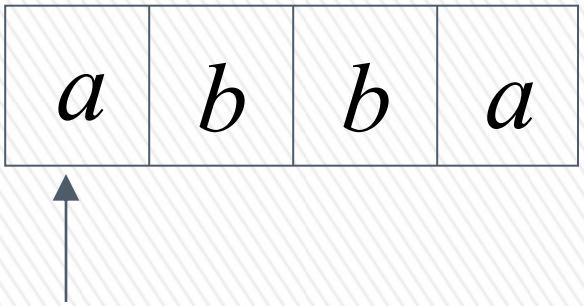
$a, a \to \varepsilon$

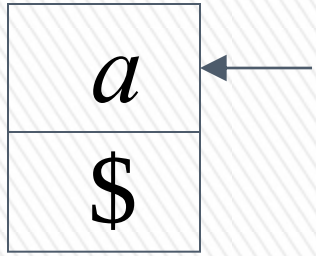
$b, b \to \varepsilon$



Time 1

Input





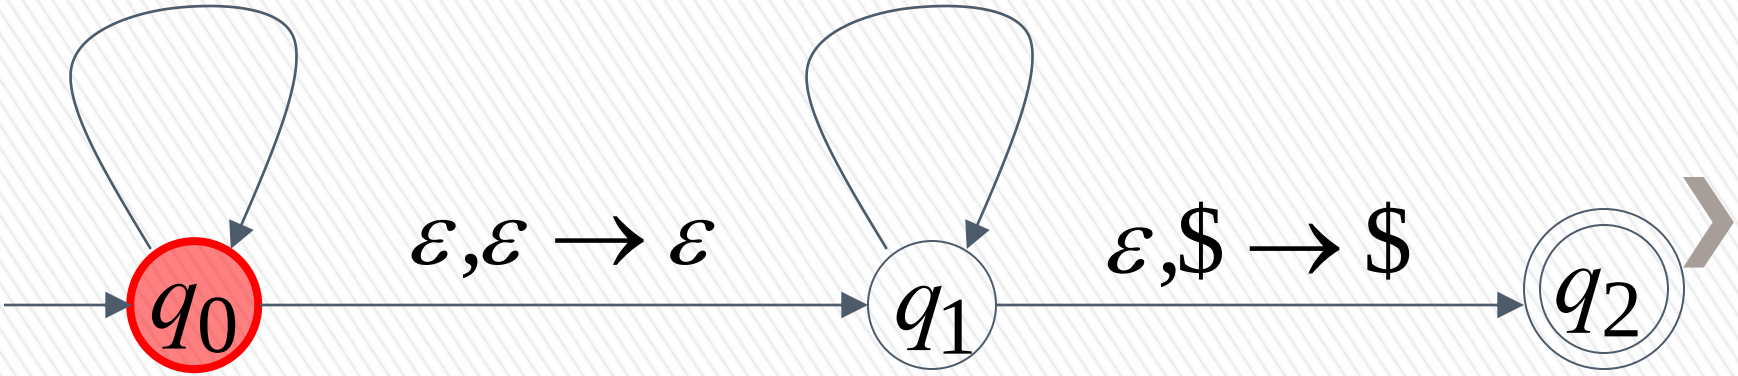
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

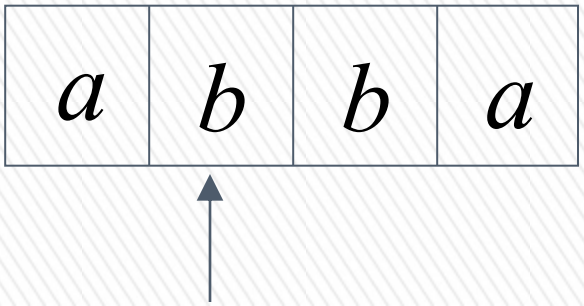
$a, a \to \varepsilon$

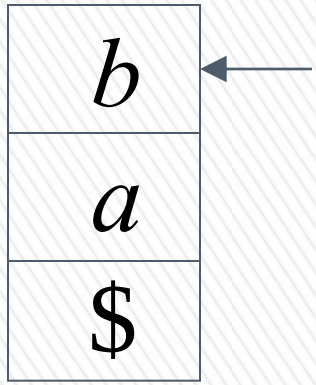
$b, b \to \varepsilon$



Time 2

Input





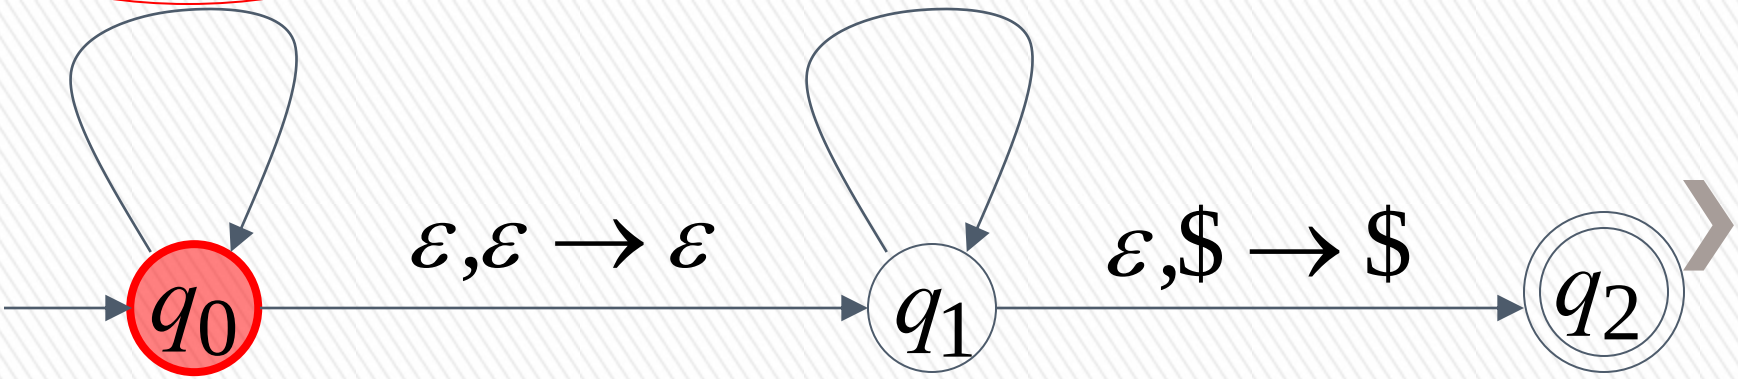
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

$a, a \to \varepsilon$

$b, b \to \varepsilon$



Time 3

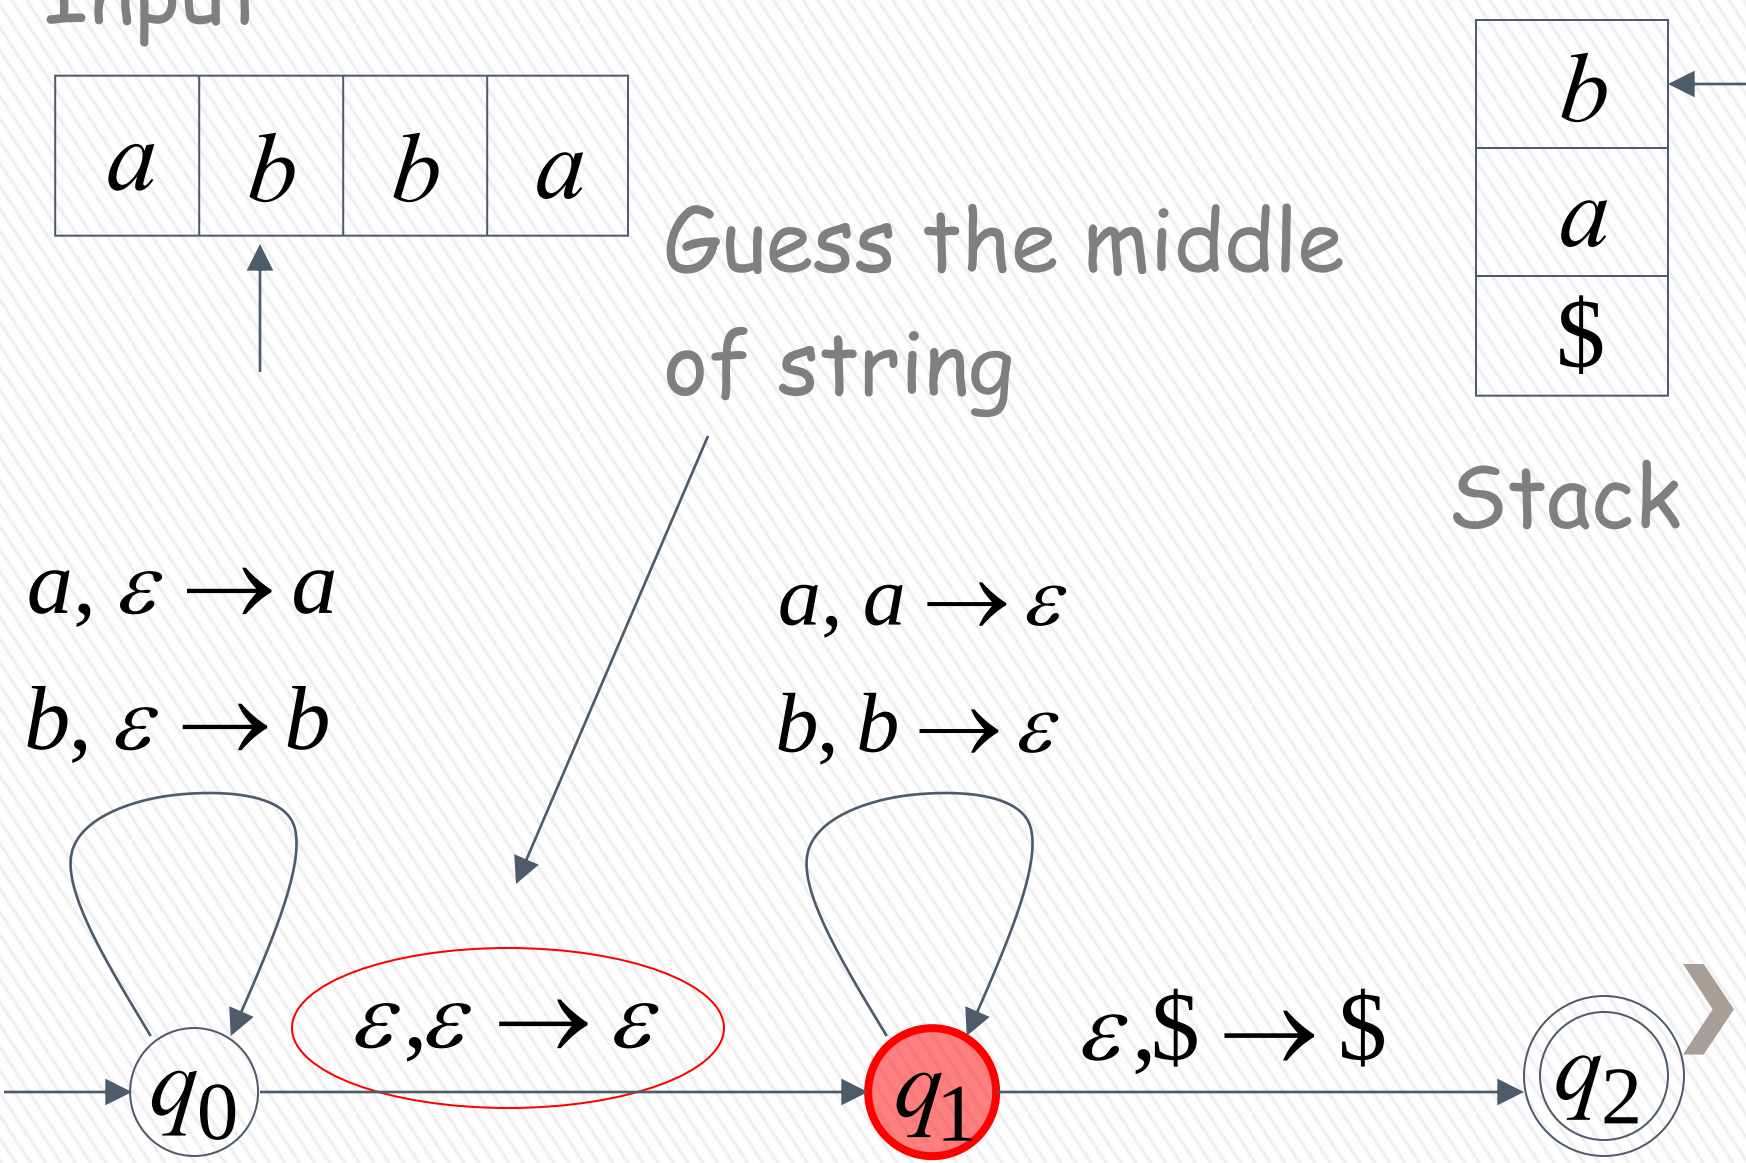
Input

a	b	b	a

Guess the middle of string

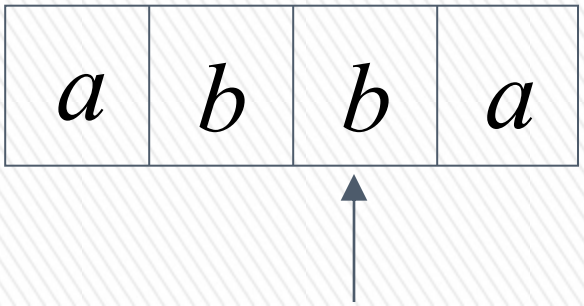
b
a
\$

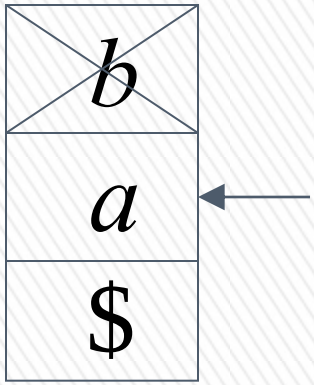
Stack



Time 4

Input





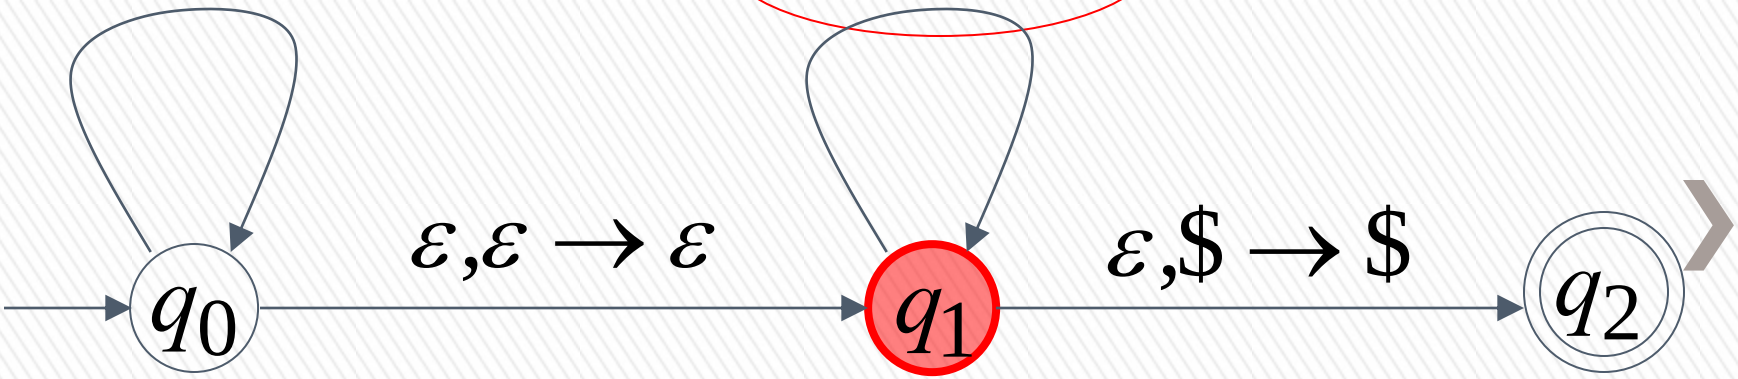
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

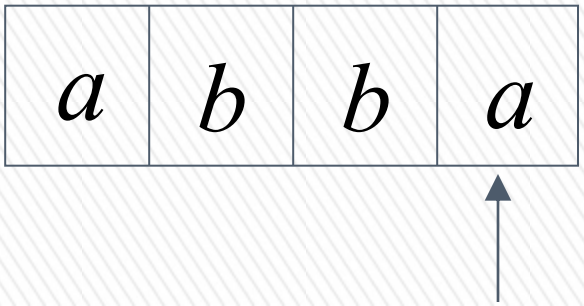
$a, a \to \varepsilon$

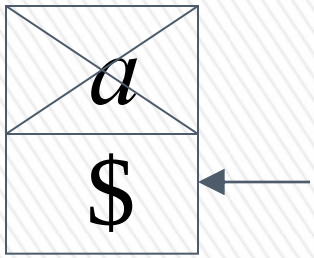
$b, b \to \varepsilon$



Time 5

Input





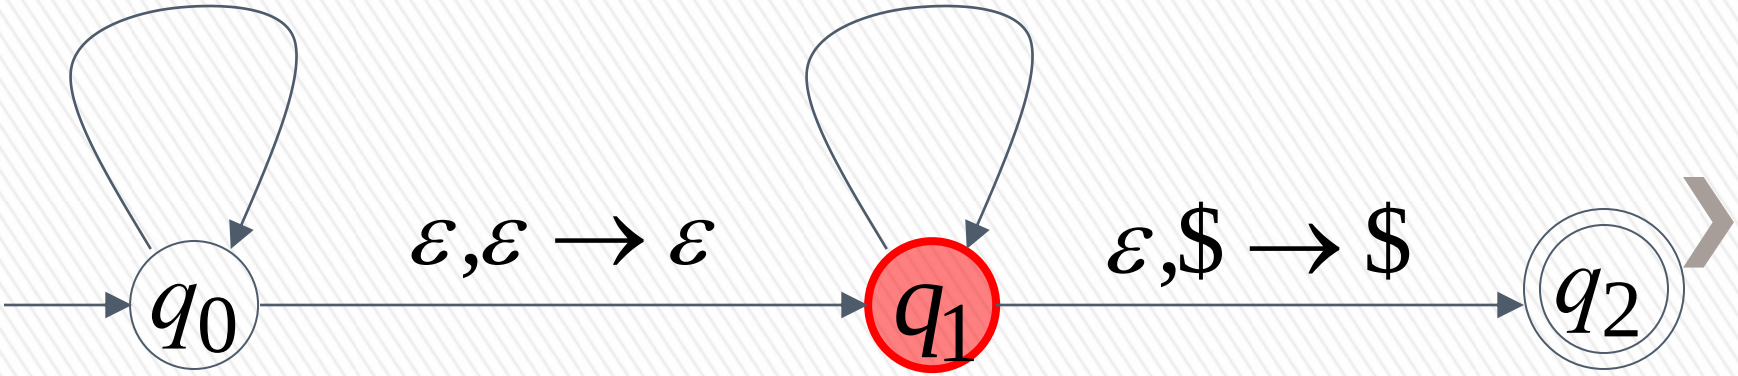
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

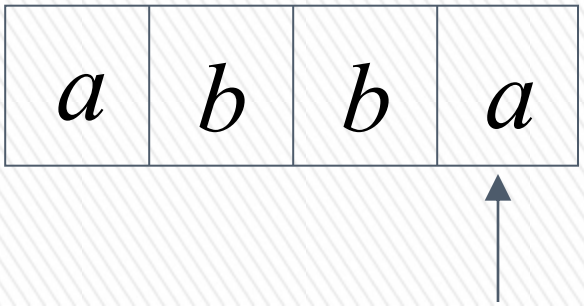
$a, a \to \varepsilon$

$b, b \to \varepsilon$



Time 6

Input



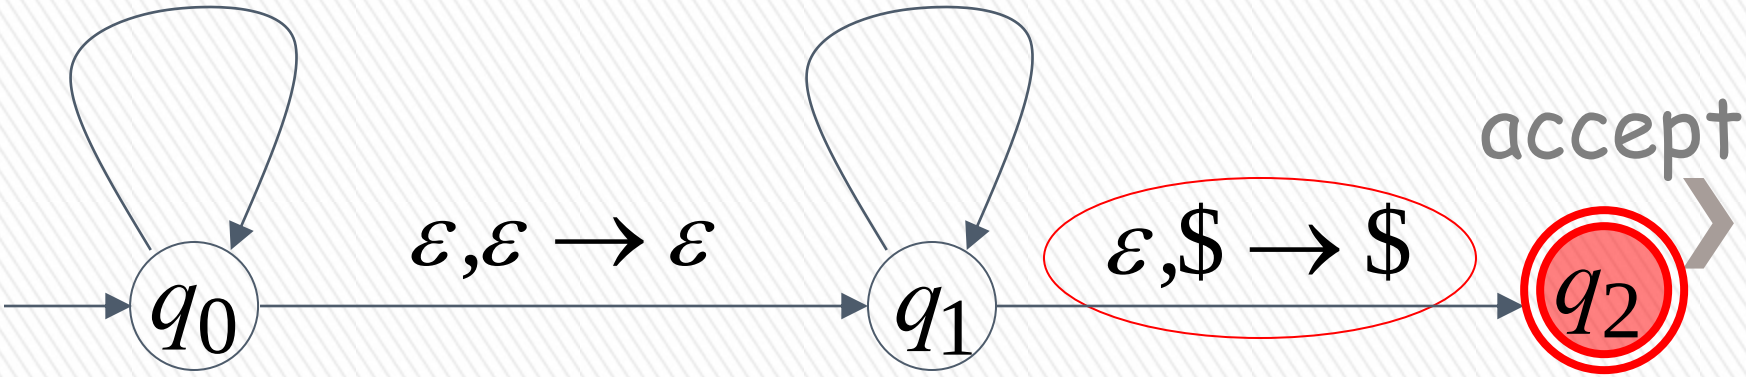
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

$a, a \to \varepsilon$

$b, b \to \varepsilon$



Rejection Example: Time 0

Input

a	b	b	b

$

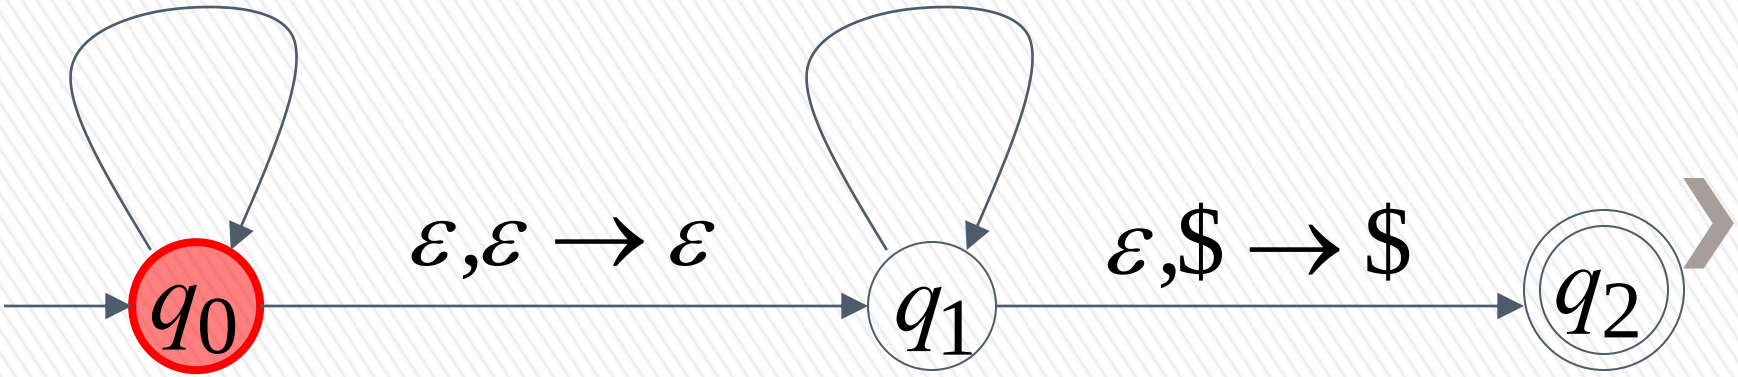
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

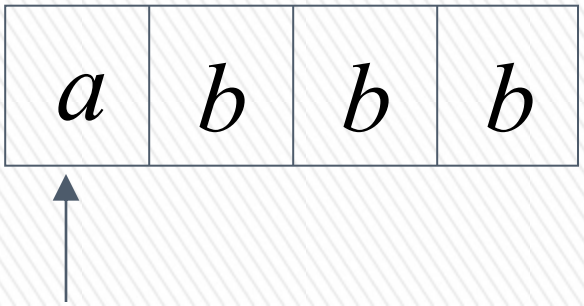
$a, a \to \varepsilon$

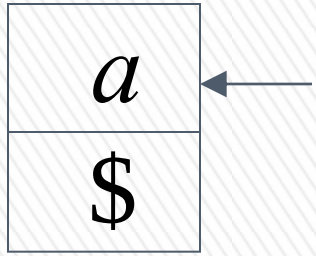
$b, b \to \varepsilon$



Time 1

Input





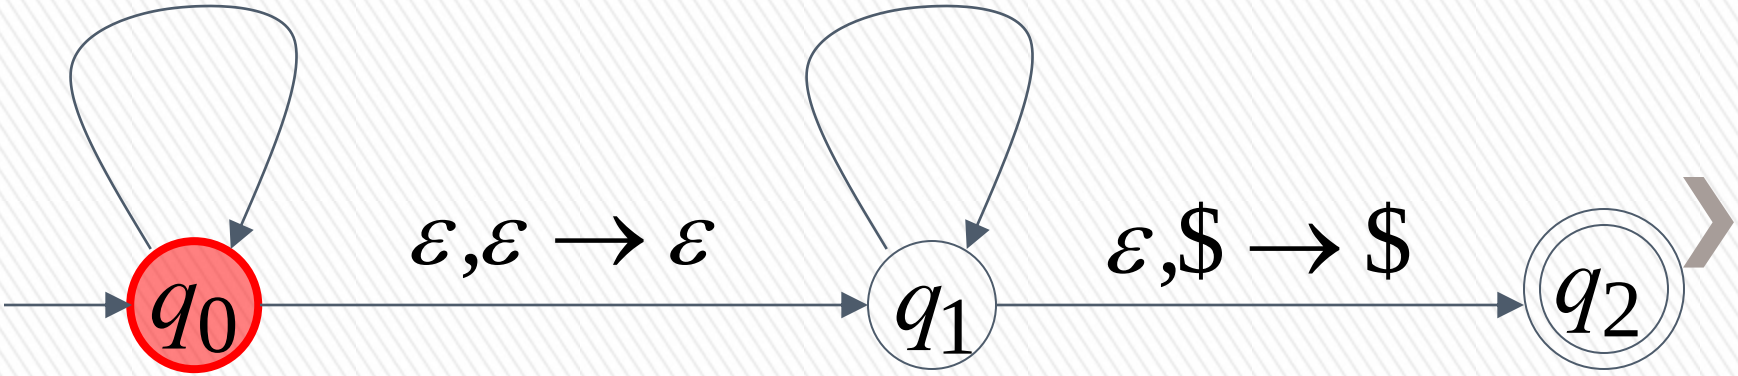
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

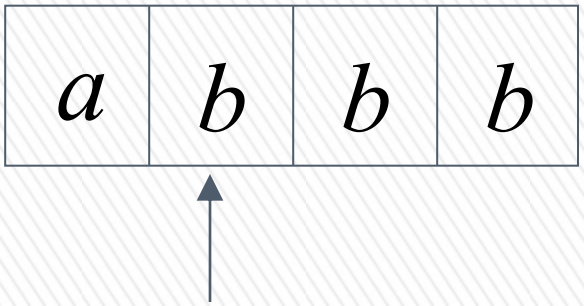
$a, a \to \varepsilon$

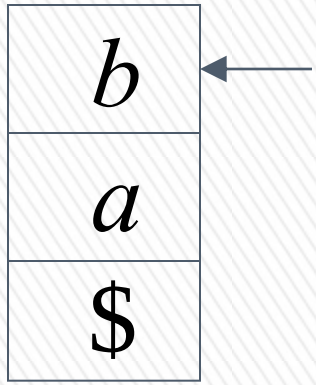
$b, b \to \varepsilon$



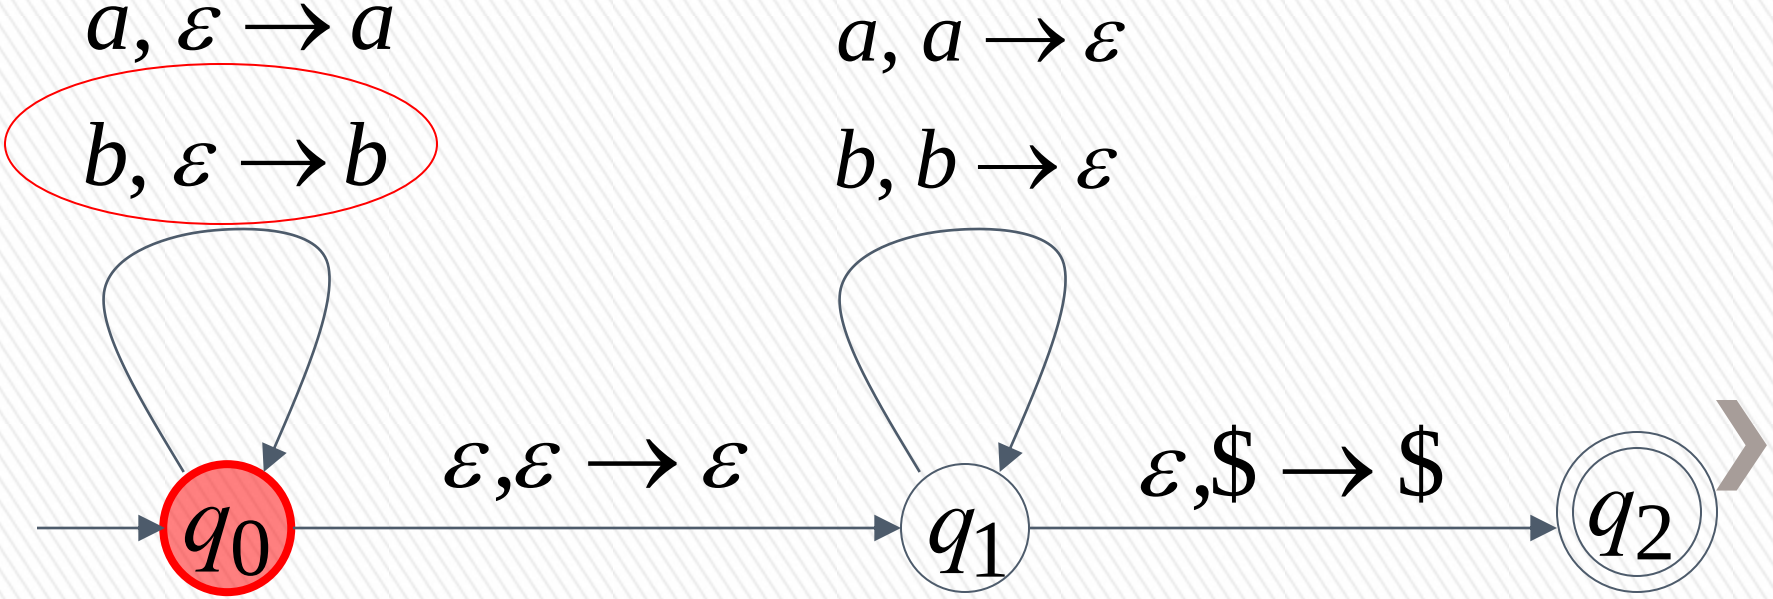
Time 2

Input



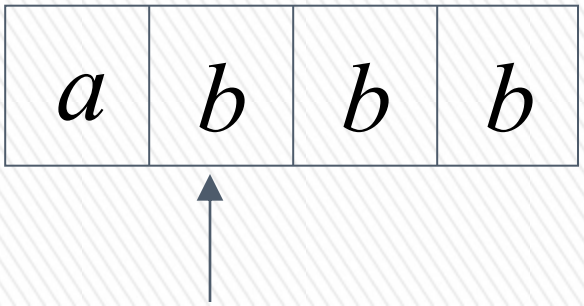


Stack

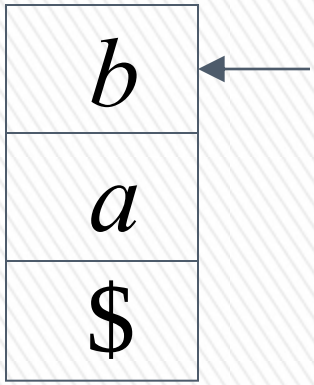


Time 3

Input



Guess the middle of string



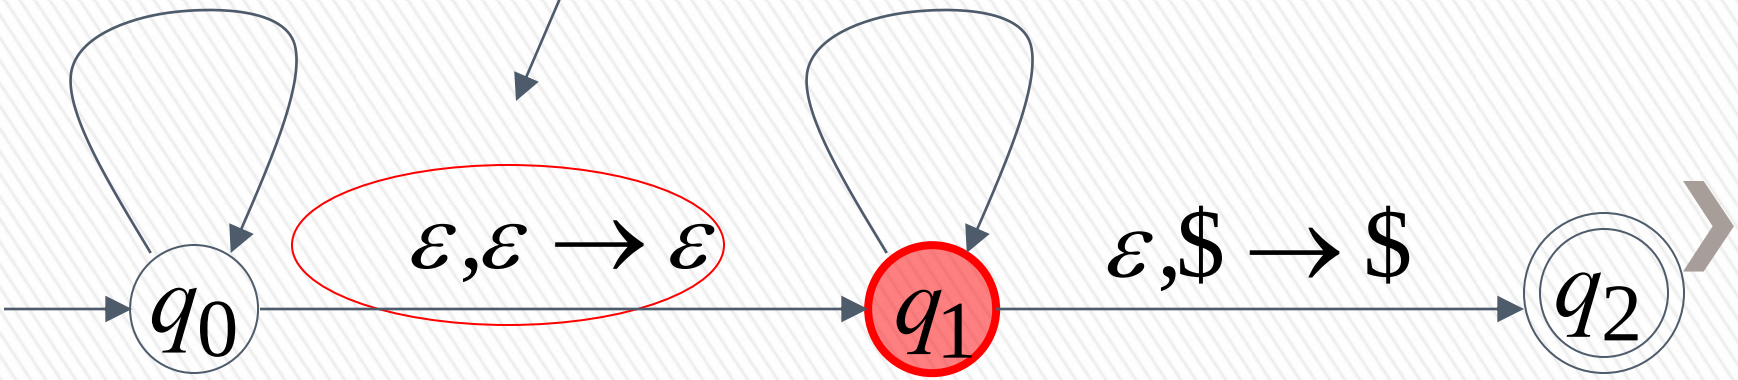
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

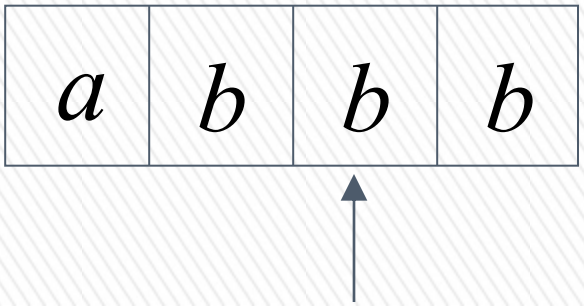
$a, a \to \varepsilon$

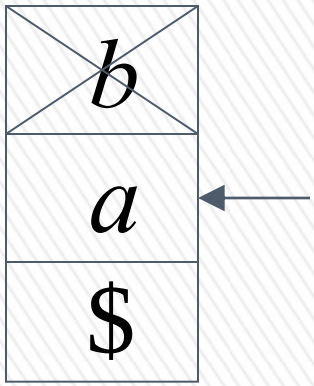
$b, b \to \varepsilon$



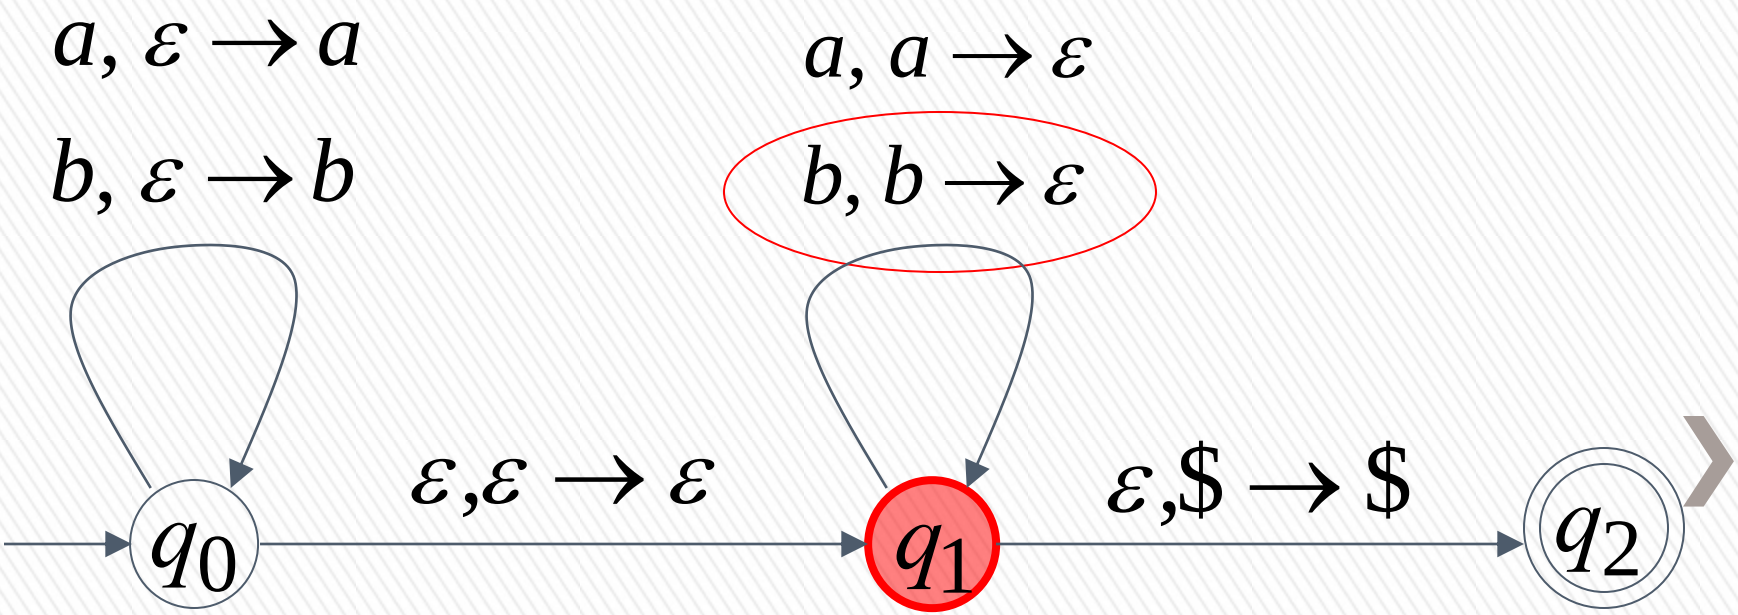
Time 4

Input





Stack



Time 5

There is no possible transition.

Input

a	b	b	b

Input is not consumed

a
$

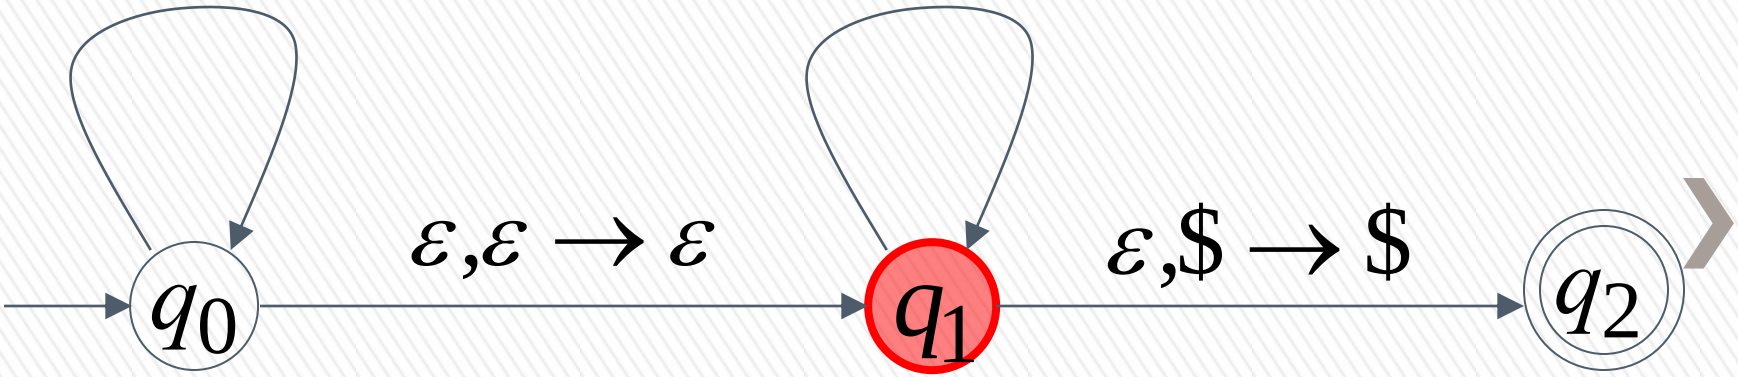
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

$a, a \to \varepsilon$

$b, b \to \varepsilon$



Another computation on same string:

Input

Time 0

a	b	b	b

$\$$

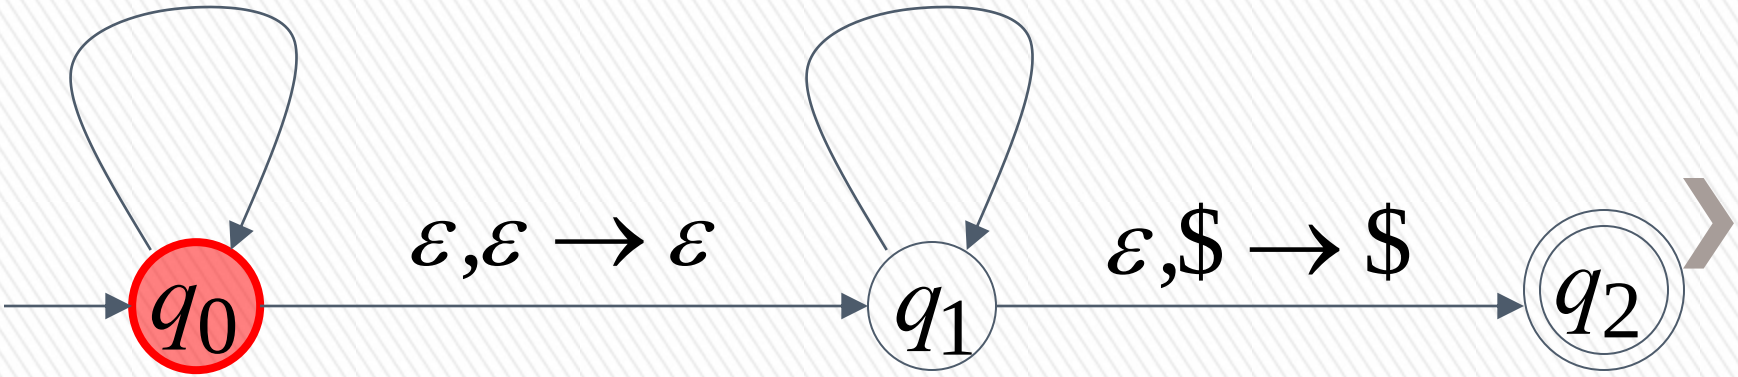
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

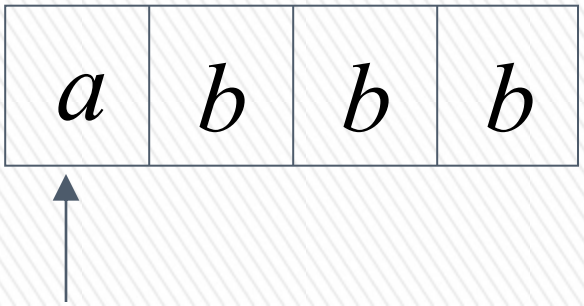
$a, a \to \varepsilon$

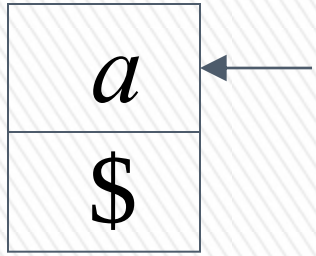
$b, b \to \varepsilon$



Time 1

Input





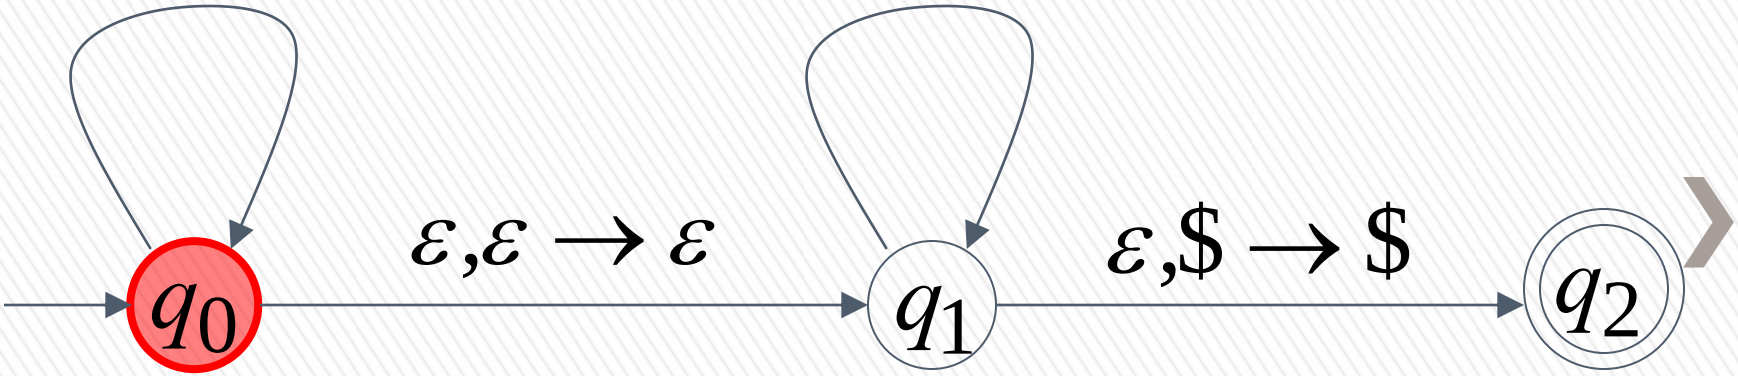
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

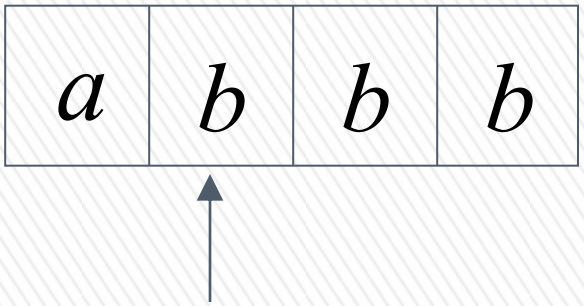
$a, a \to \varepsilon$

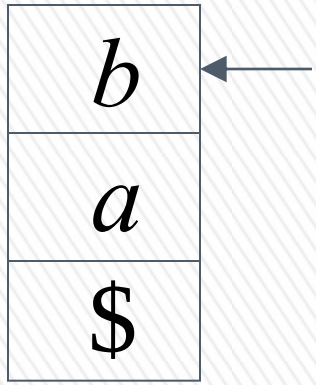
$b, b \to \varepsilon$



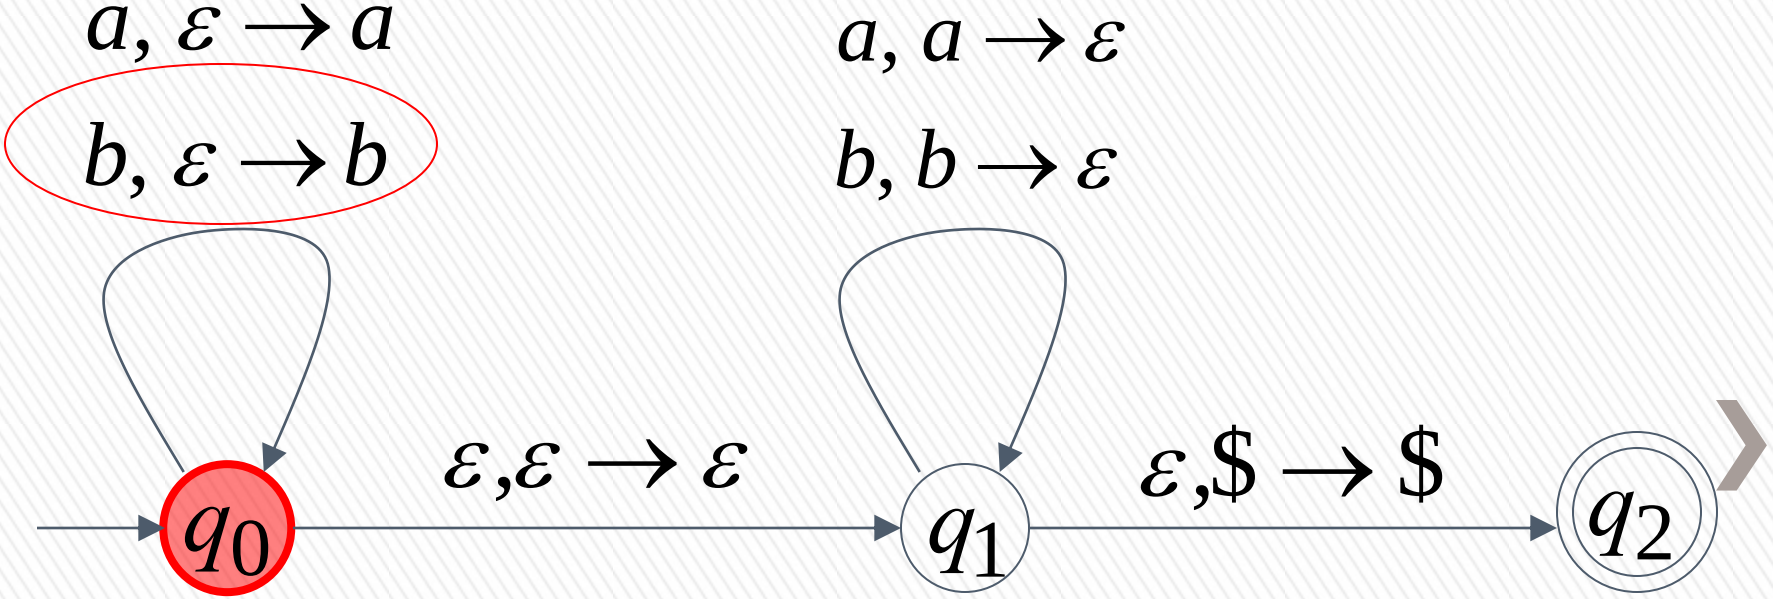
Time 2

Input



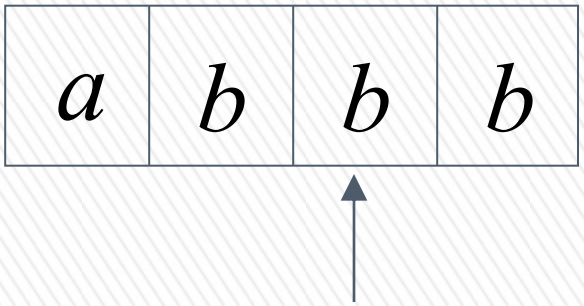


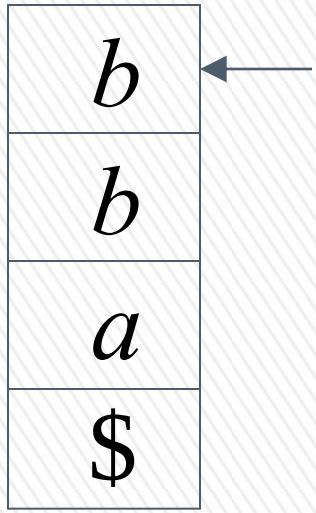
Stack



Time 3

Input





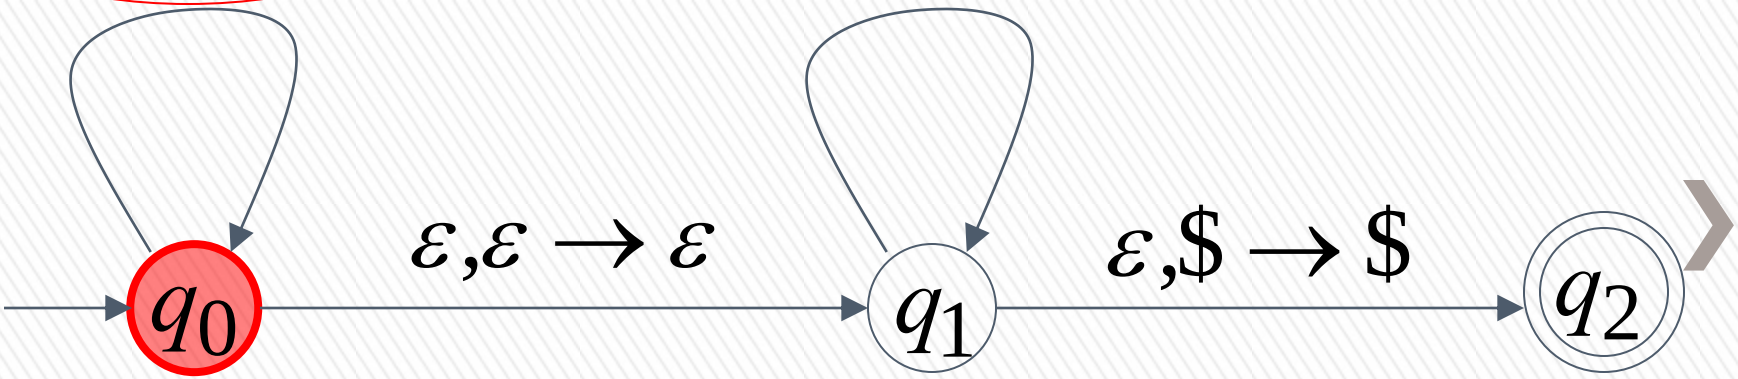
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

$a, a \to \varepsilon$

$b, b \to \varepsilon$



Time 4

Input

a	b	b	b

b
b
b
a
\$

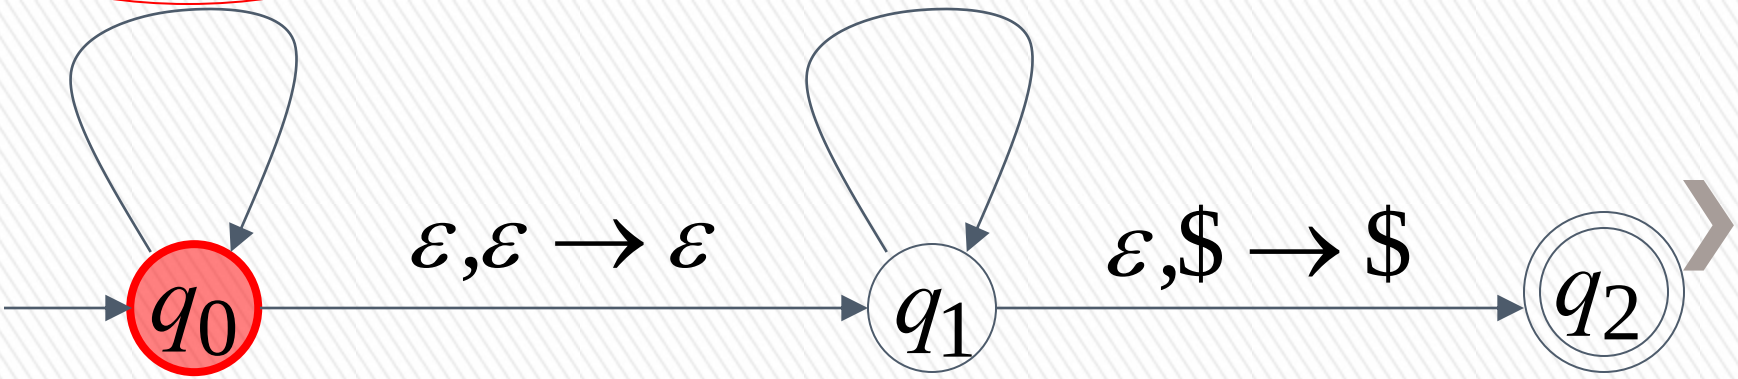
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

$a, a \to \varepsilon$

$b, b \to \varepsilon$



Time 5

Input

a	b	b	b

No accept state is reached

b
b
b
a
\$

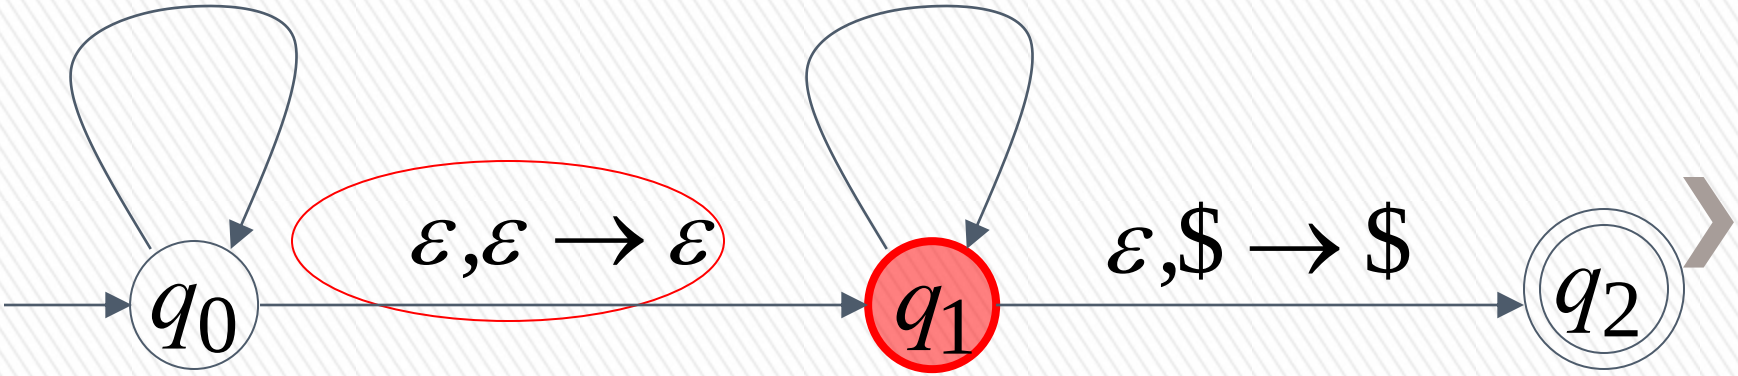
Stack

$a, \varepsilon \to a$

$b, \varepsilon \to b$

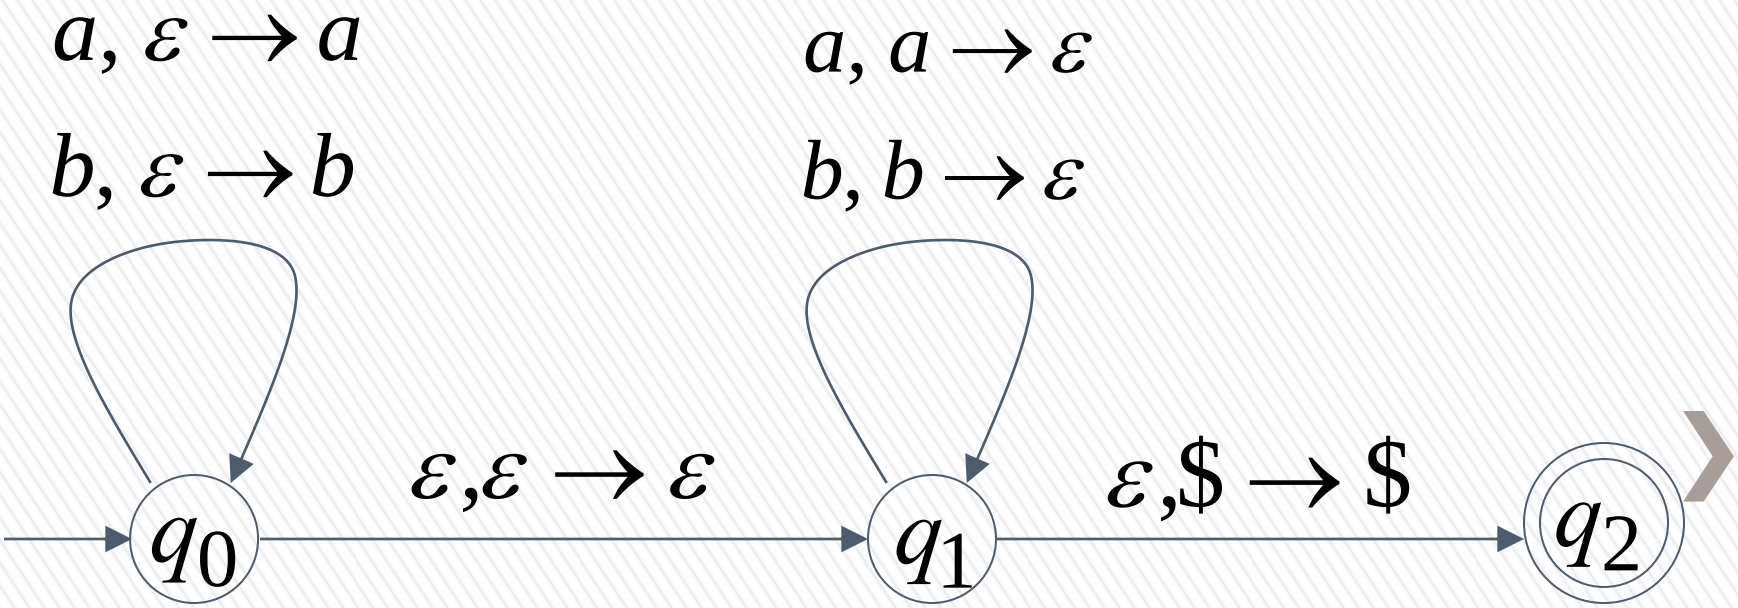
$a, a \to \varepsilon$

$b, b \to \varepsilon$

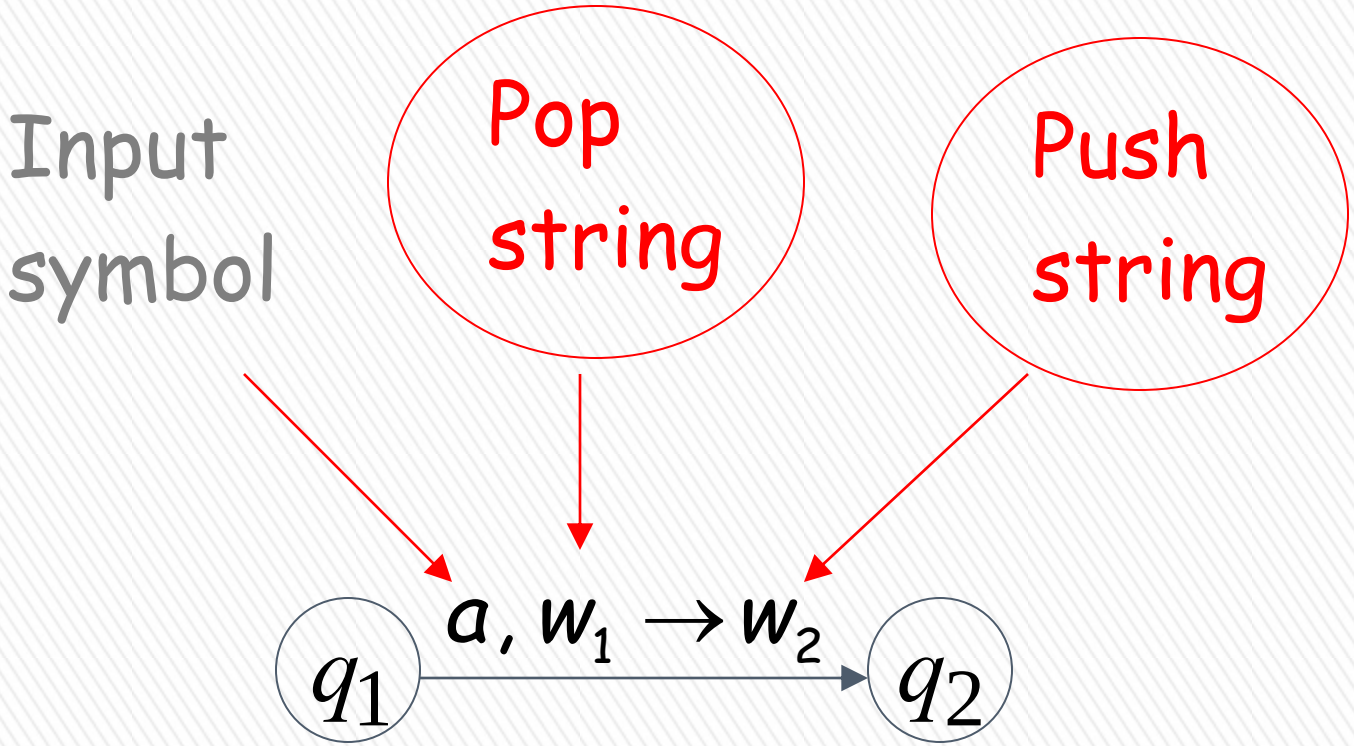


There is no computation that accepts string $abbb$

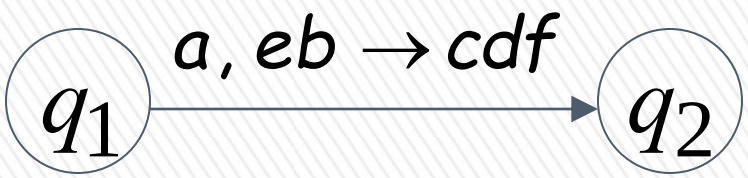
$$abbb \notin L(M)$$



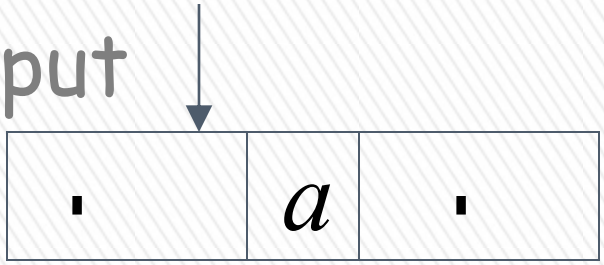
Pushing & Popping Strings

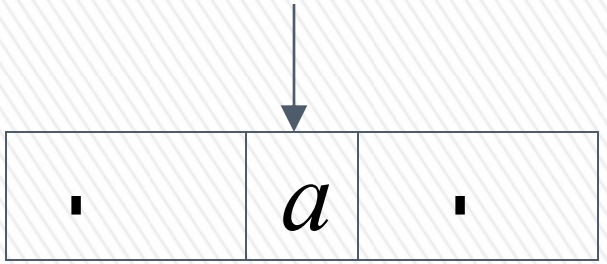


Example:



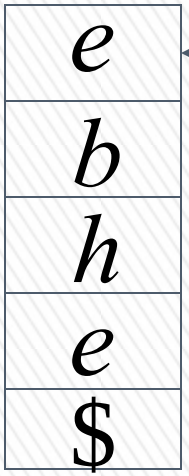
input





stack

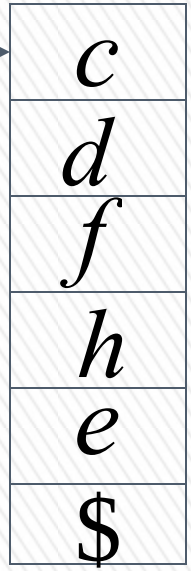
pop string



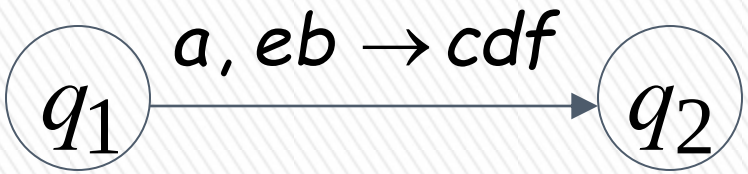
top

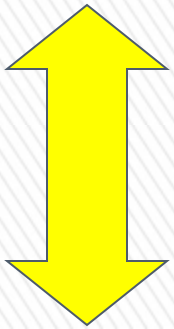
Replace

top



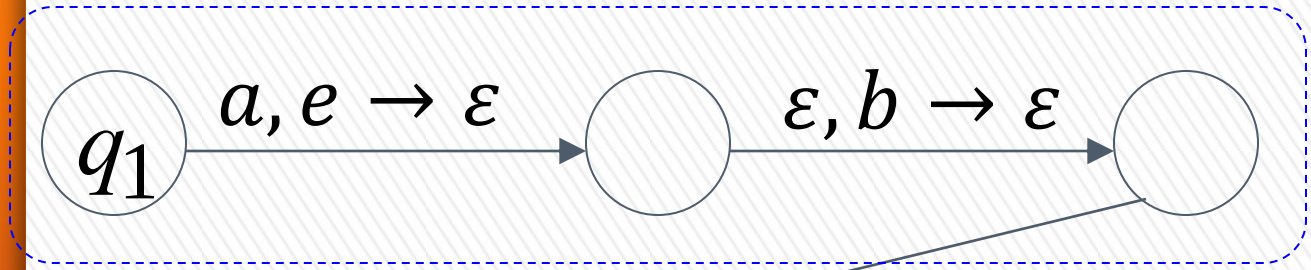
push string

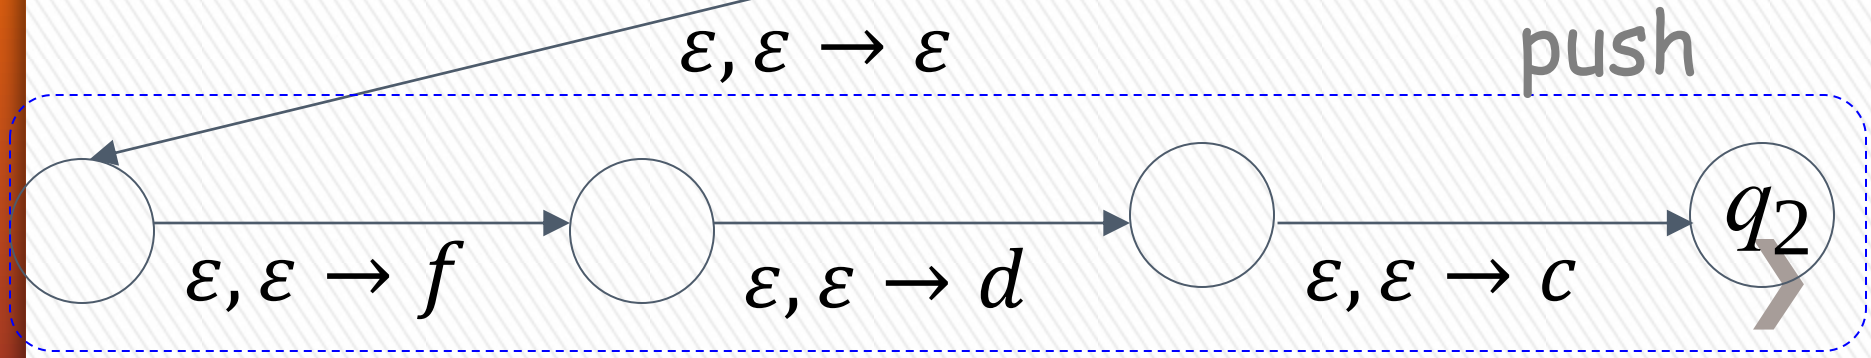




Equivalent transitions

pop





Another PDA example

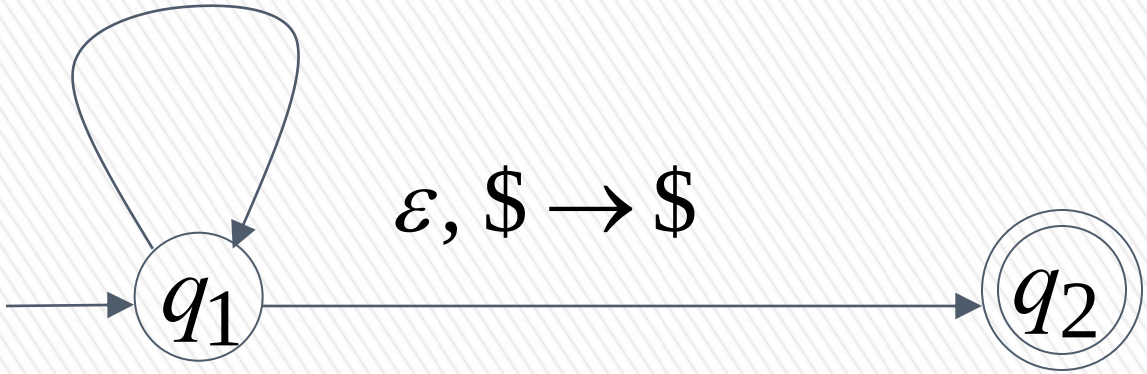
$$L(M) = \{w \in \{a,b\}^* : \; n_a(w) = n_b(w)\}$$

PDA M

$a, \$ \to 0\$$ $\quad b, \$ \to 1\$$

$a, 0 \to 00$ $\quad b, 1 \to 11$

$a, 1 \to \varepsilon$ $\quad b, 0 \to \varepsilon$



Execution Example: Time 0

Input

a	b	b	b	a	a

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

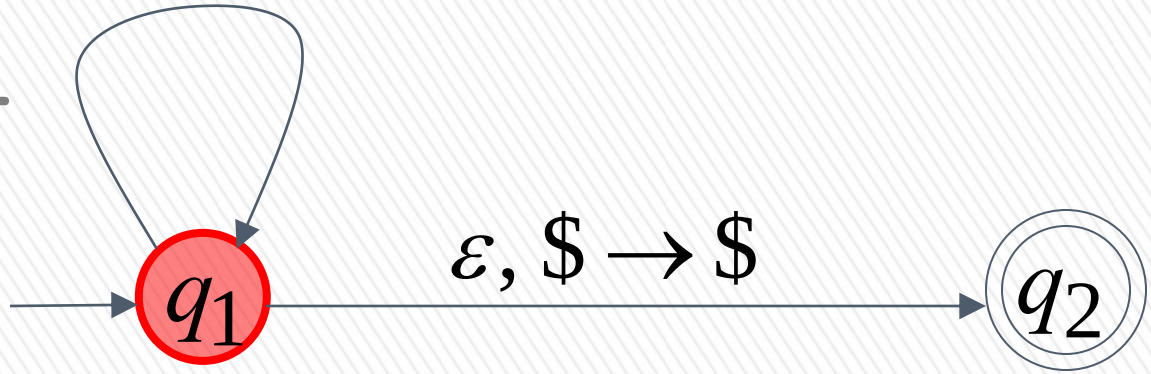
$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$

$\$$

Stack

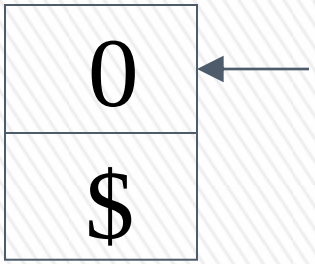
current state



Time 1

Input

a	b	b	b	a	a

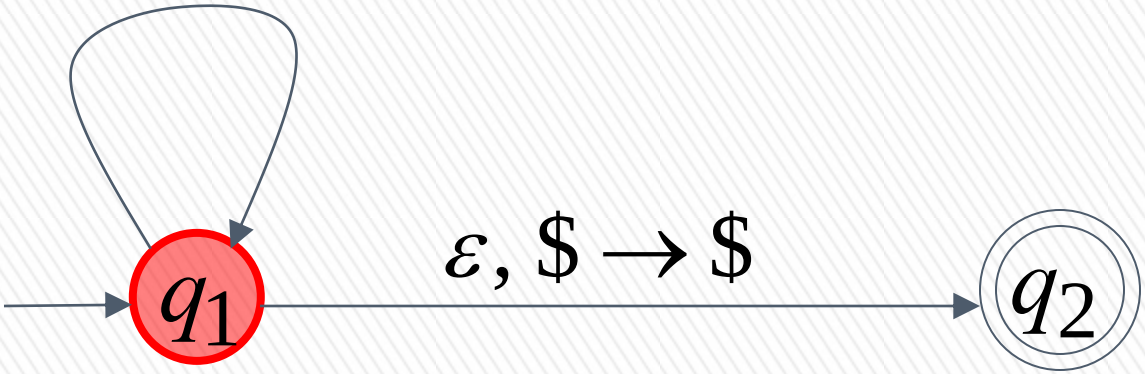


Stack

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

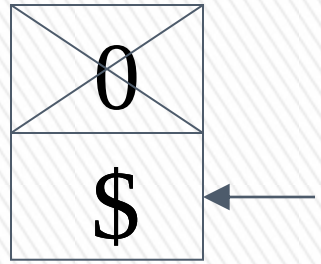
$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$



Time 3

Input

a	b	b	b	a	a

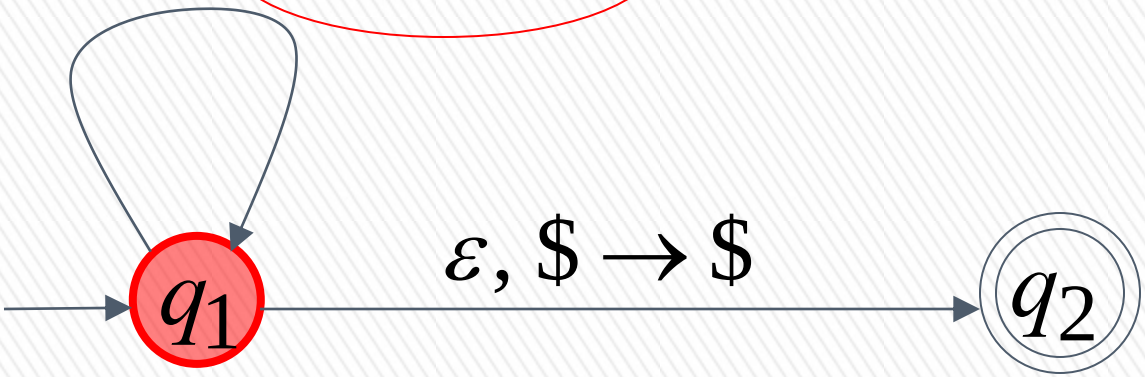


Stack

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

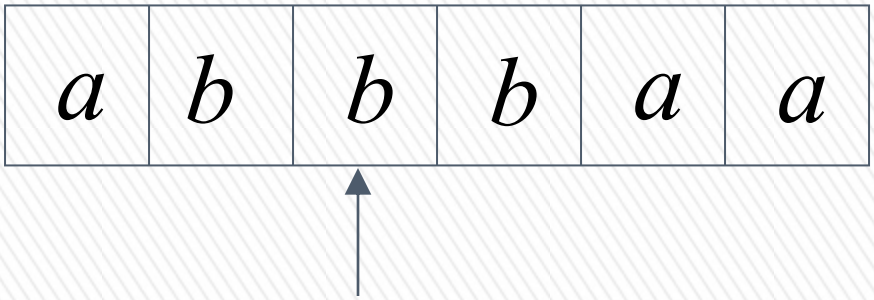
$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

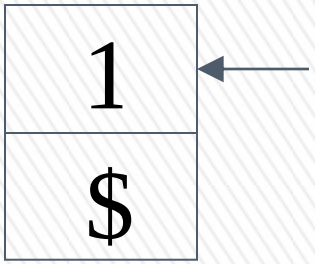
$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$



Time 4

Input



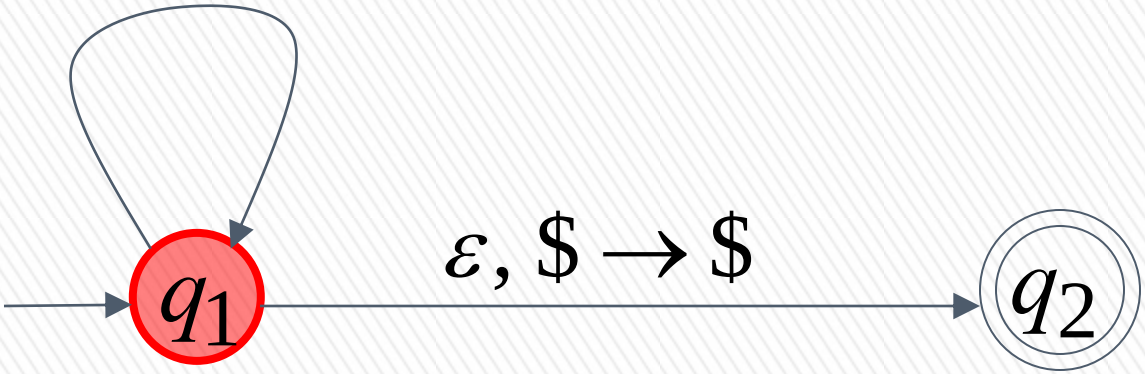


Stack

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

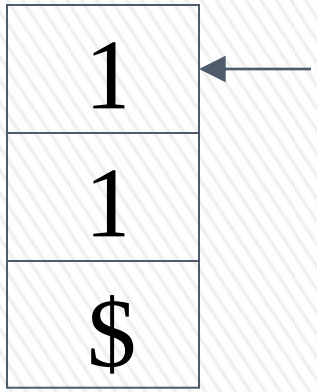
$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$



Time 5

Input

a	b	b	b	a	a

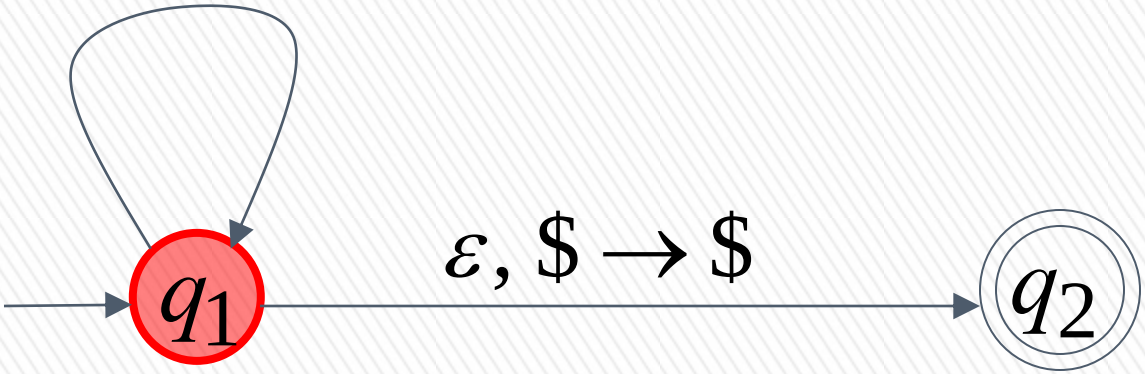


Stack

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

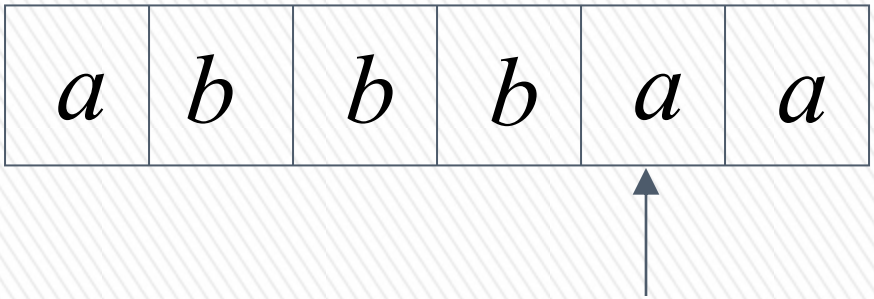
$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

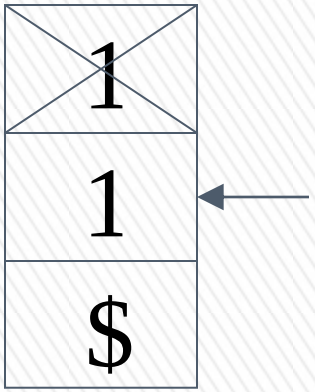
$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$



Time 6

Input



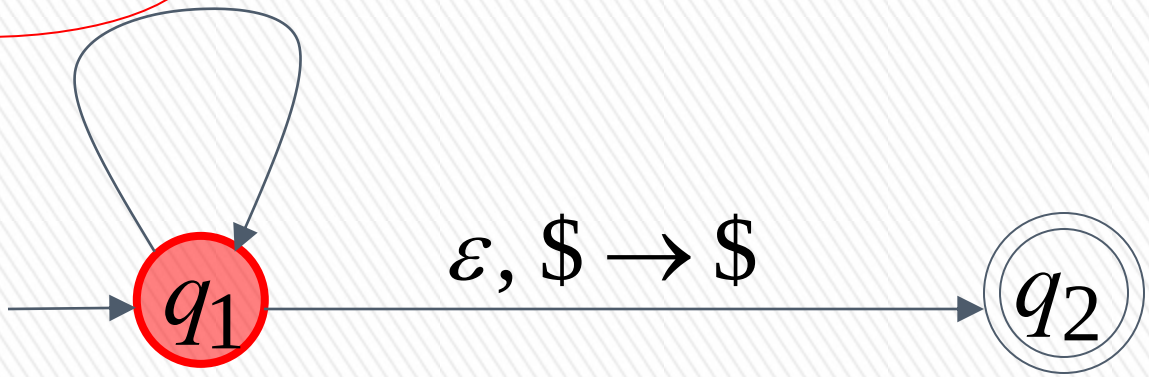


Stack

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

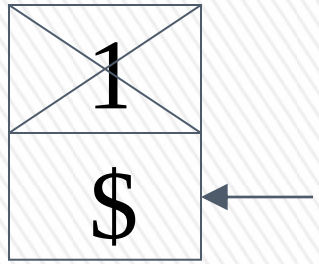
$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$



Time 7

Input

a	b	b	b	a	a

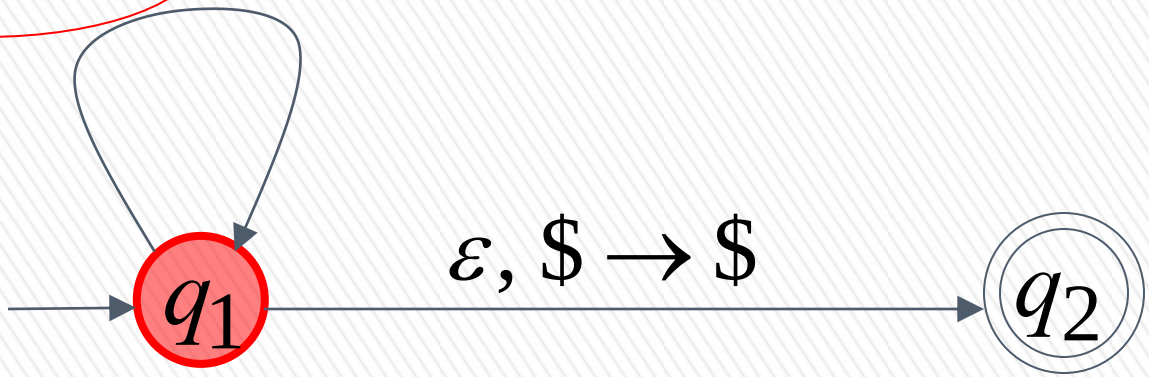


Stack

$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$



Time 8

Input

a	b	b	b	a	a

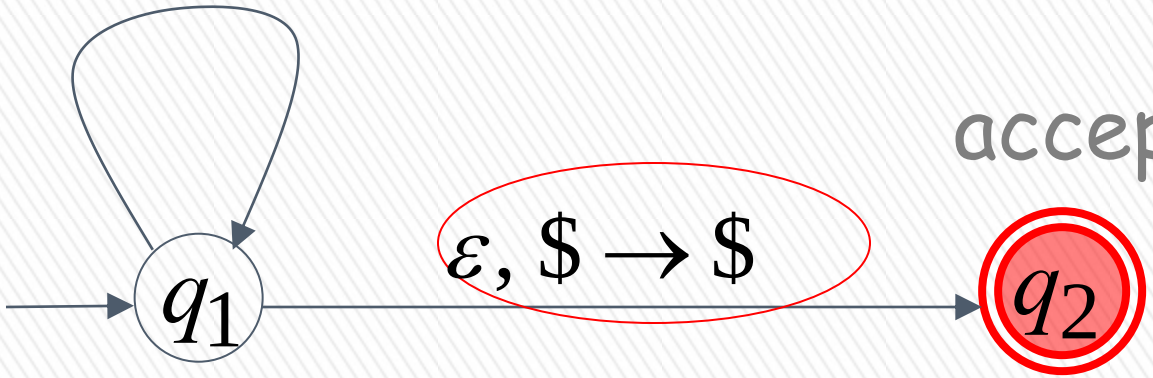
$a, \$ \rightarrow 0\$$ $b, \$ \rightarrow 1\$$

$a, 0 \rightarrow 00$ $b, 1 \rightarrow 11$

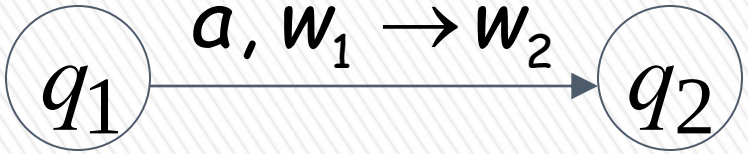
$a, 1 \rightarrow \varepsilon$ $b, 0 \rightarrow \varepsilon$

$\$$

Stack

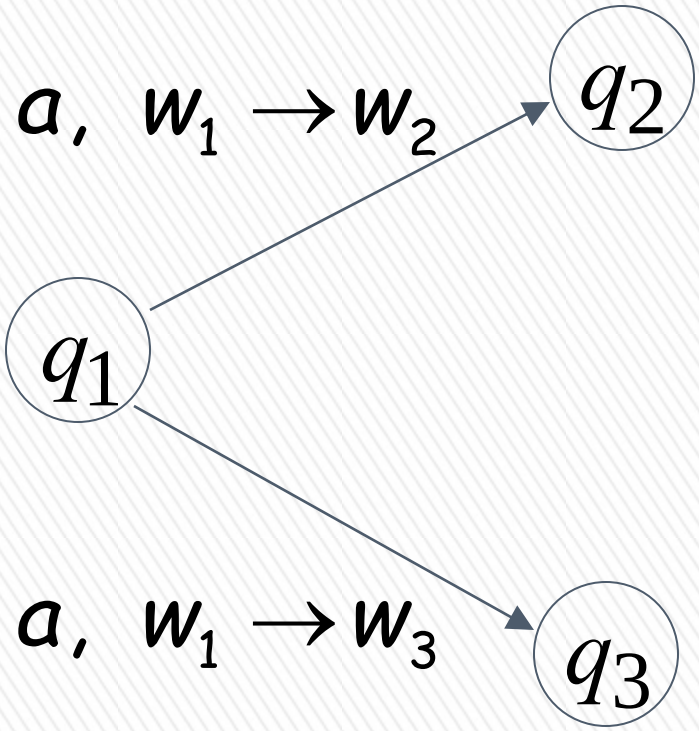


Formalities for PDAs



Transition function:

$$\delta(q_1, a, w_1) = \{(q_2, w_2)\}$$



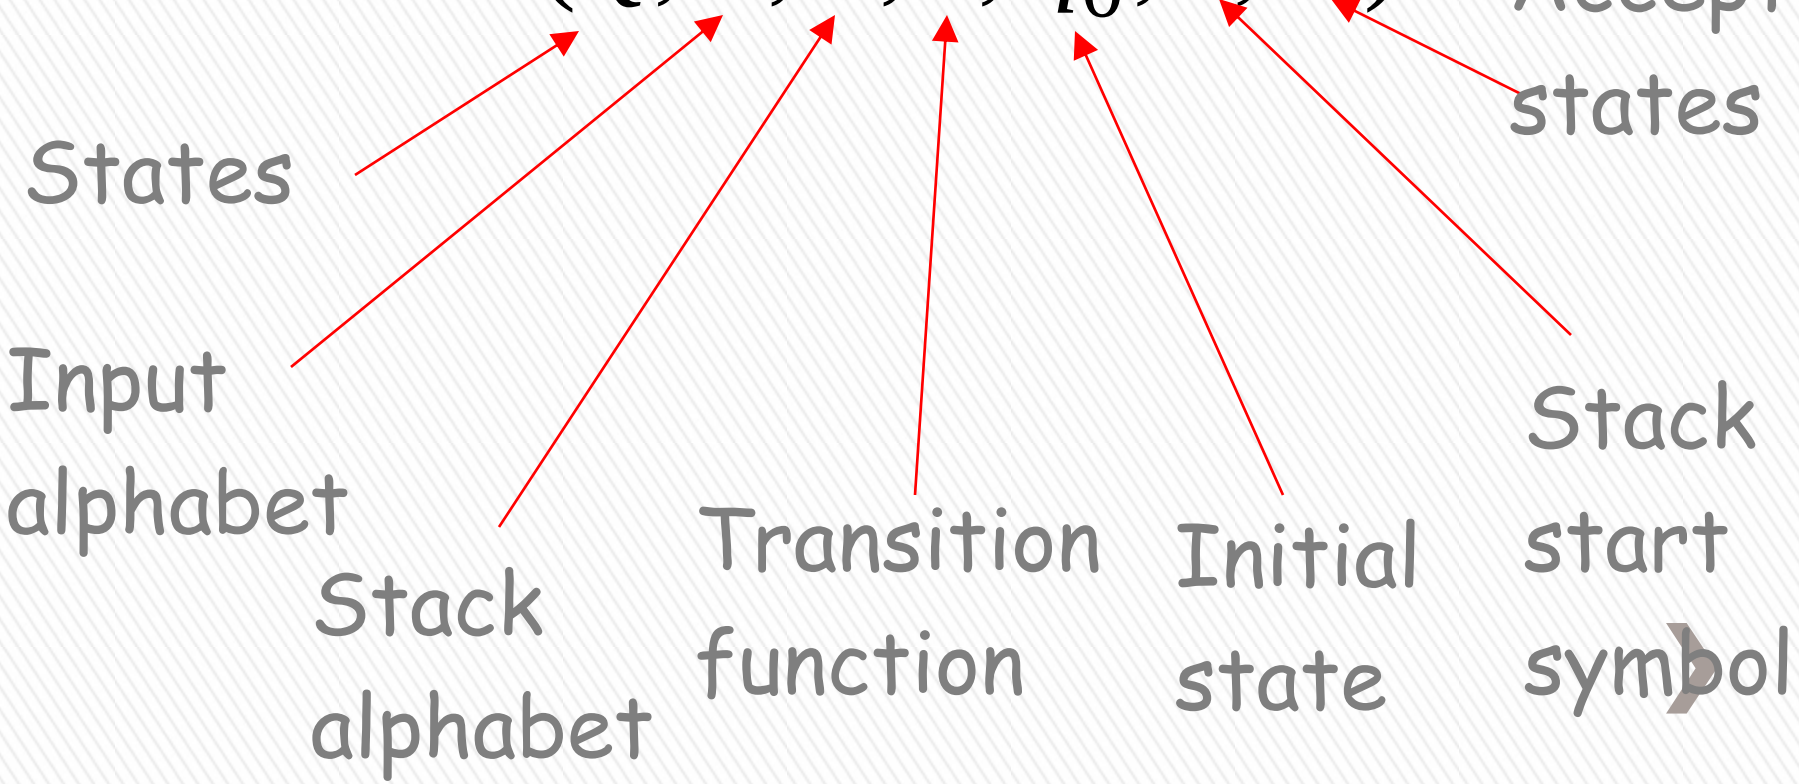
Transition function:

$$\delta(q_1, a, w_1) = \{(q_2, w_2), (q_3, w_3)\}$$

Formal Definition

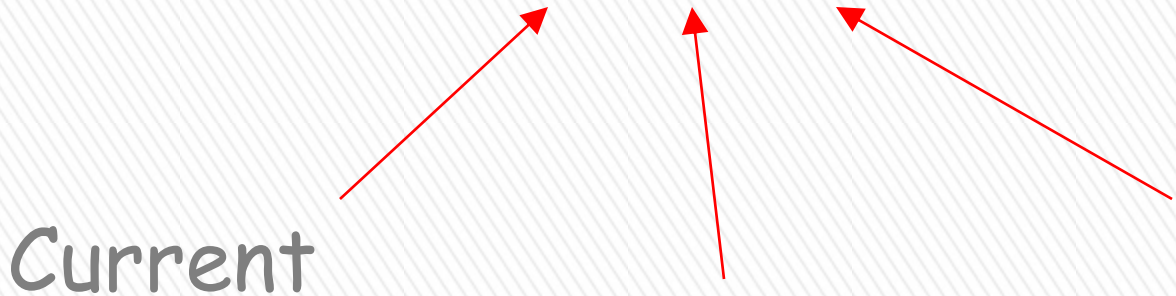
Pushdown Automaton (PDA)

$$M = (Q, \Sigma, \Gamma, \delta, q_0, z, F)$$



Instantaneous Description

$$(q,\ u,\ s)$$

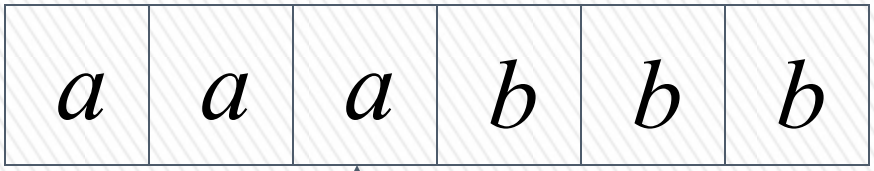


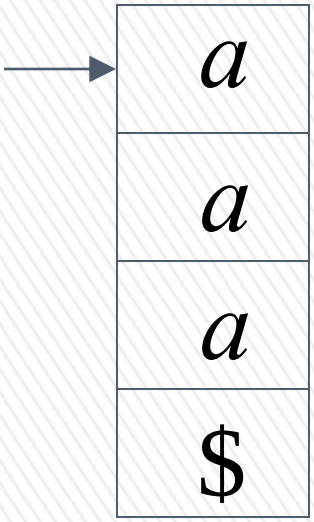
Example: **Instantaneous Description**

$$(q_1, bbb, aaa\$)$$

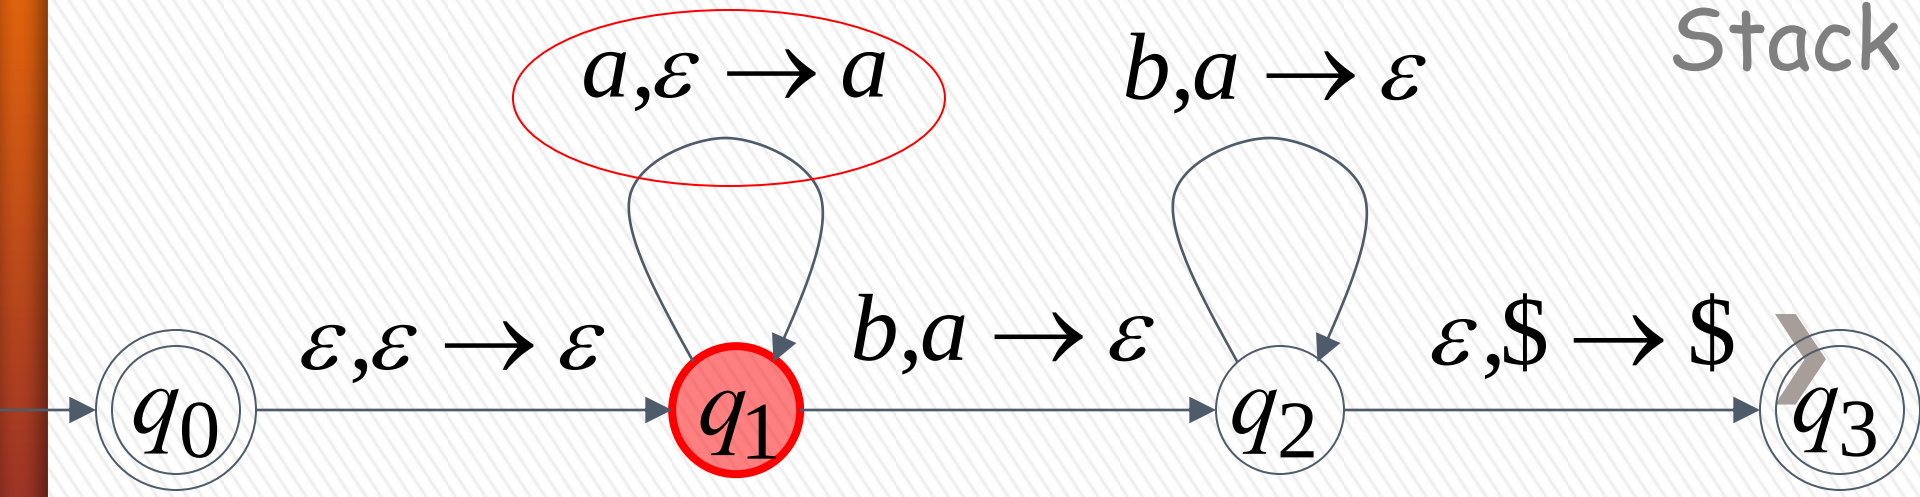
Time 4:

Input





Stack

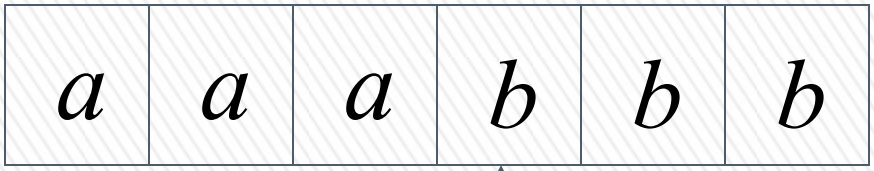


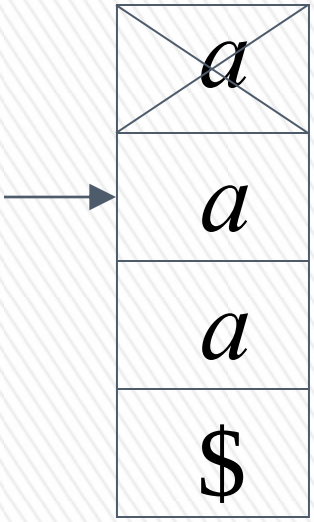
Example: **Instantaneous Description**

$$(q_2, bb, aa\$)$$

Time 5:

Input

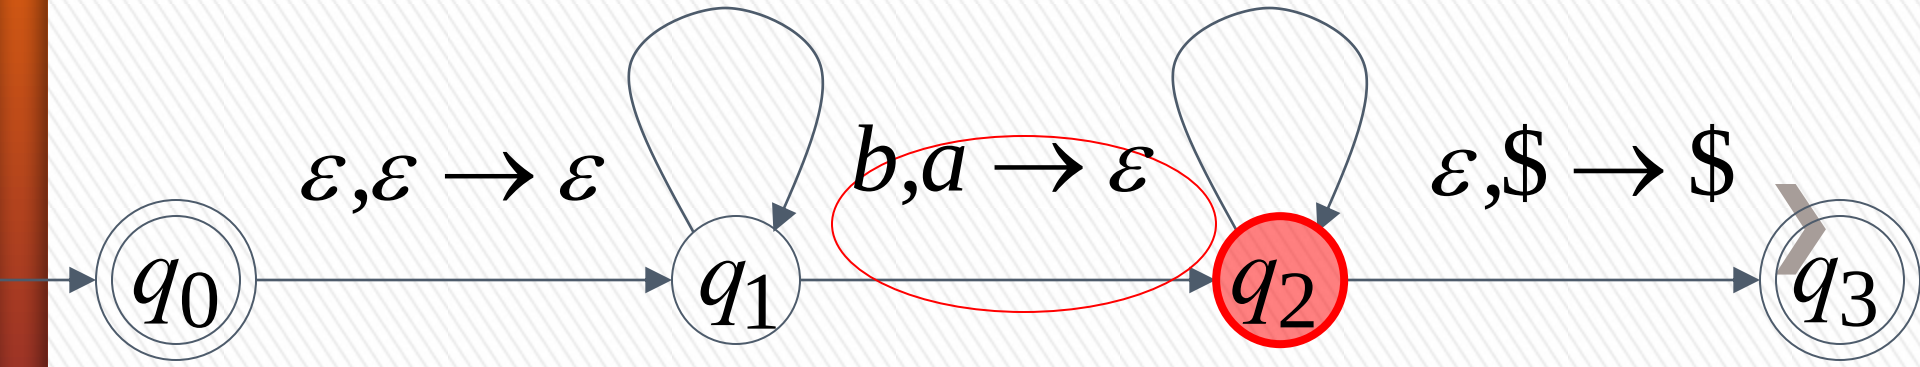




Stack

$a, \varepsilon \rightarrow a$

$b, a \rightarrow \varepsilon$



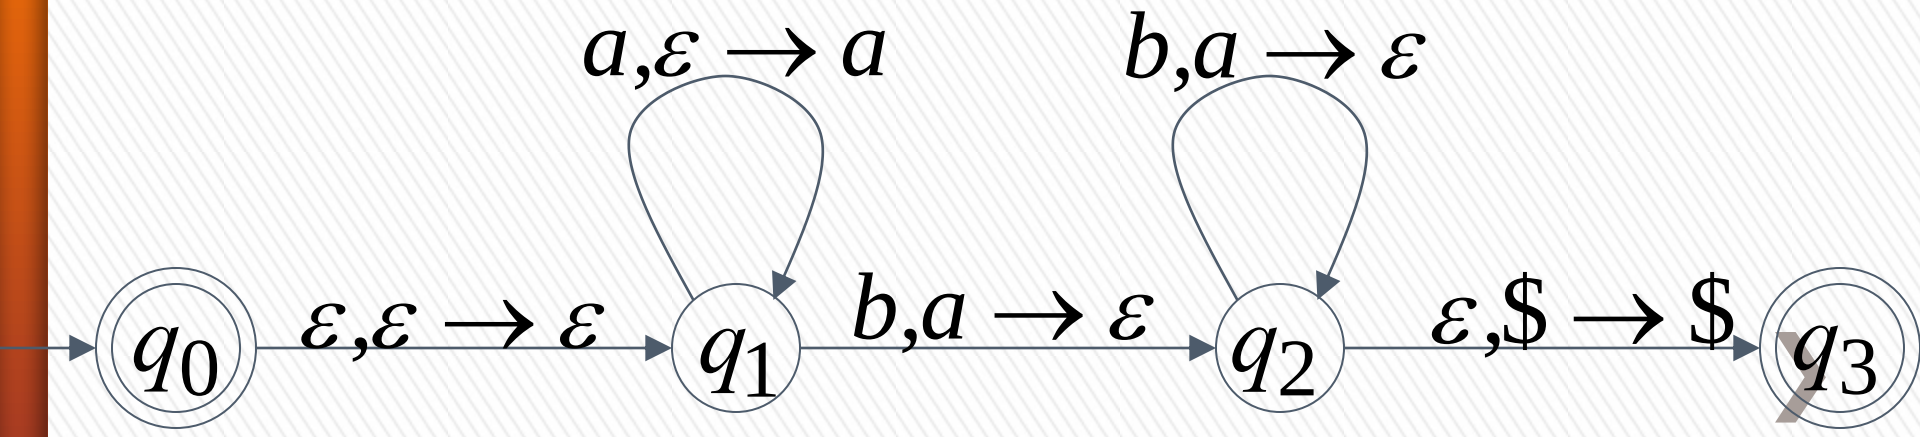
We write:

$$(q_1, bbb, aaa\$) \succ (q_2, bb, aa\$)$$

Time 4 Time 5

A computation:

$$(q_0, aaabbb, \$) \succ (q_1, aaabbb, \$) \succ$$
$$(q_1, aabbb, a\$) \succ (q_1, abbb, aa\$) \succ (q_1, bbb, aaa\$) \succ$$
$$(q_2, bb, aa\$) \succ (q_2, b, a\$) \succ (q_2, \varepsilon, \$) \succ (q_3, \varepsilon, \$)$$



$$(q_0, aaabbb, \$) \succ (q_1, aaabbb, \$) \succ$$
$$(q_1, aabbb, a\$) \succ (q_1, abbb, aa\$) \succ (q_1, bbb, aaa\$) \succ$$
$$(q_2, bb, aa\$) \succ (q_2, b, a\$) \succ (q_2, \varepsilon, \$) \succ (q_3, \varepsilon, \$)$$

For convenience we write:

$$(q_0, aaabbb, \$) \overset{*}{\succ} (q_3, \varepsilon, \$)$$

Language of PDA

Language $L(M)$ accepted by PDA M:

$$L(M) = \{w: \ (q_0, w, z) \overset{*}{\succ} (q_f, \varepsilon, s)\}$$

Initial state

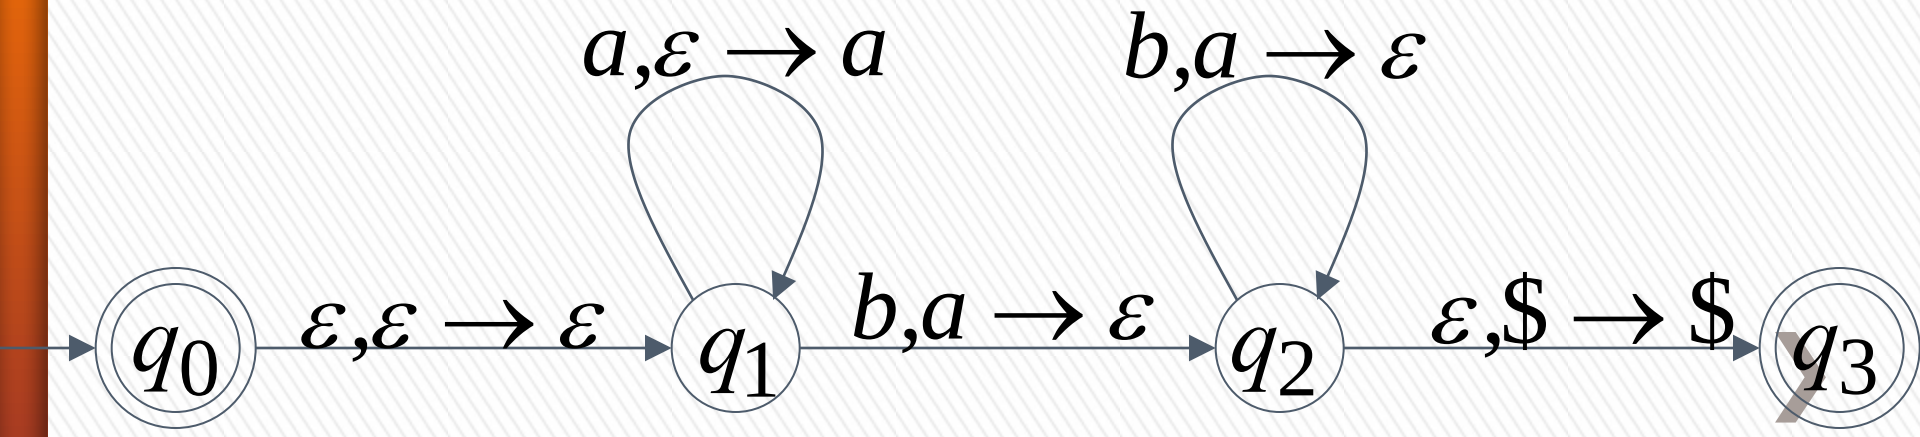
Accept state

Example:

$$(q_0, aaabbb, \$) \overset{*}{\succ} (q_3, \varepsilon, \$)$$

$$aaabbb \in L(M)$$

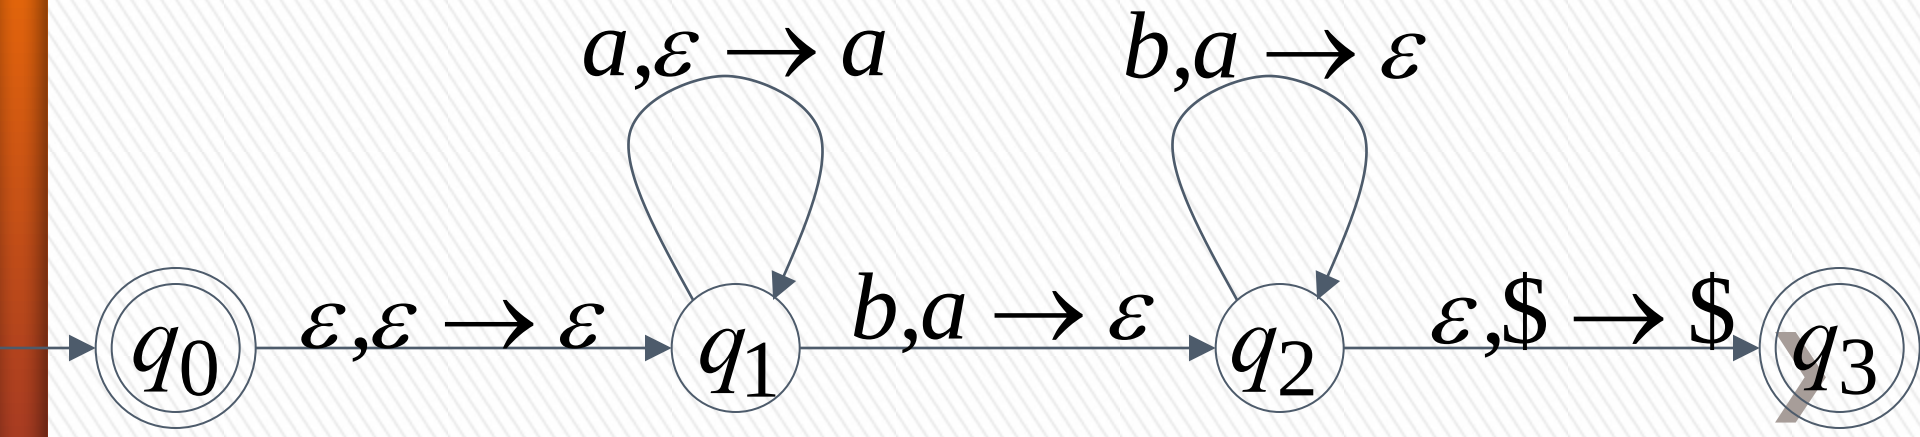
PDA **M** :



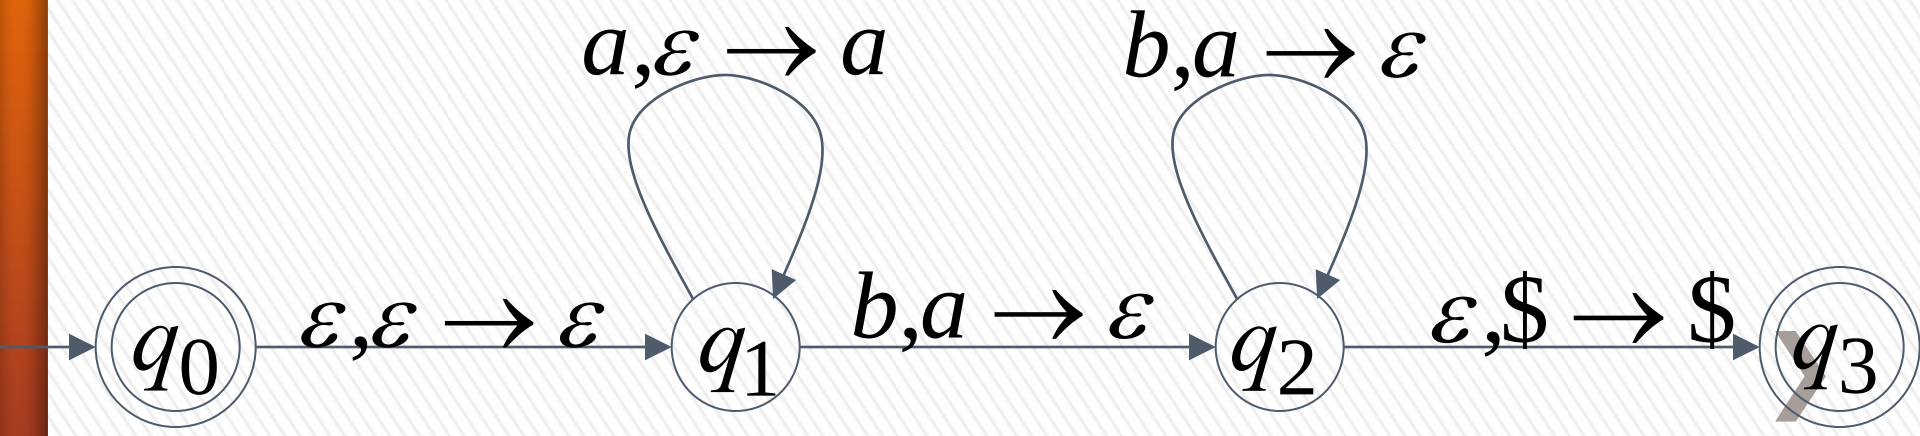
$$(q_0, a^n b^n, \$) \overset{*}{\succ} (q_3, \varepsilon, \$)$$

$$a^n b^n \in L(M)$$

PDA M :



Therefore:

$$L(M) = \{a^n b^n : n \geq 0\}$$


PDA M :
